## 74F190

# **Up/Down Decade Counter with Preset and Ripple Clock**

### **General Description**

The 74F190 is a reversible BCD (8421) decade counter featuring synchronous counting and asynchronous presetting. The preset feature allows the 74F190 to be used in programmable dividers. The Count Enable input, the Terminal Count output and the Ripple Clock output make possible a variety of methods of implementing multistage counters. In the counting modes, state changes are initiated by the rising edge of the clock.

#### **Features**

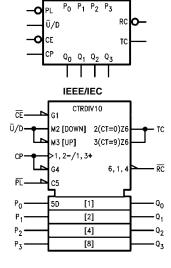

- High-speed—125 MHz typical count frequency
- Synchronous counting
- Asynchronous parallel load
- Cascadable

### **Ordering Code:**

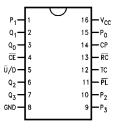

| Order Number | Package Number | Package Description   |
|--------------|----------------|---|
| 74F190SC     | M16A           | 16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150 Narrow |
| 74F190PC     | N16E           | 16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide       |

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

#### **Logic Symbols**

### **Functional Description**

The 74F190 is a synchronous up/down BCD decade counter containing four edge-triggered flip-flops, with internal gating and steering logic to provide individual preset, count-up and count-down operations. It has an asynchronous parallel load capability permitting the counter to be preset to any desired number. When the Parallel Load (PL) input is LOW, information present on the Parallel Data inputs (P<sub>0</sub>-P<sub>3</sub>) is loaded into the counter and appears on the Q outputs. This operation overrides the counting functions, as indicated in the Mode Select Table. A HIGH signal on the  $\overline{\text{CE}}$  input inhibits counting. When  $\overline{\text{CE}}$  is LOW, internal state changes are initiated synchronously by the LOWto-HIGH transition of the clock input. The direction of counting is determined by the  $\overline{\mbox{U}}/\mbox{D}$  input signal, as indicated in the Mode Select Table,  $\overline{\text{CE}}$  and  $\overline{\text{U}}/\text{D}$  can be changed with the clock in either state, provided only that the recommended setup and hold times are observed.

Two types of outputs are provided as overflow/underflow indicators. The Terminal Count (TC) output is normally LOW and goes HIGH when a circuit reaches zero in the count-down mode or reaches 9 in the count-up mode. The TC output will then remain HIGH until a state change occurs, whether by counting or presetting or until  $\overline{\text{U}}/\text{D}$  is changed. The TC output should not be used as a clock signal because it is subject to decoding spikes. The TC signal is also used internally to enable the Ripple Clock (RC) output. The RC output is normally HIGH. When CE is LOW and TC is HIGH, the RC output will go LOW when the clock next goes LOW and will stay LOW until the clock goes HIGH again. This feature simplifies the design of multistage counters. For a discussion and illustrations of the various methods of implementing multistage counters, please see the 74F191 data sheet.

#### **RC Truth Table**

|    | Output |    |    |
|----|--------|----|----|

# **Absolute Maximum Ratings**(Note 1)

-65°C to +150°C

-30 mA to +5.0 mA

-55°C to +125°C Ambient Temperature under Bias Junction Temperature under Bias  $-55^{\circ}C$  to  $+150^{\circ}C$ V<sub>CC</sub> Pin Potential to Ground Pin -0.5V to +7.0VInput Voltage (Note 2) -0.5V to +7.0V

Input Current (Note 2) Voltage Applied to Output

Storage Temperature

in HIGH State (with  $V_{CC} = 0V$ )

Standard Output -0.5V to  $V_{CC}$ 3-STATE Output -0.5V to +5.5V

Current Applied to Output

in LOW State (Max) twice the rated  $I_{OL}$  (mA)

## **Recommended Operating Conditions**

Free Air Ambient Temperature 0°C to +70°C Supply Voltage +4.5V to +5.5V

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- 1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- 2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
