

LC²MOS Quad SPST Switches

ADG201A/ADG202A

FEATURES

44V Supply Maximum Rating
±15V Analog Signal Range
Low R_{ON} (60Ω)
Low Leakage (0.5nA)
Break Before Make Switching
**Extended Plastic Temperature Range
(-40°C to +85°C)**
Low Power Dissipation (33mW)
**Available in 16-Lead DIP/SOIC and
20-Lead PLCC/LCCC Packages**
Superior Second Source:
ADG201A Replaces DG201A, HI-201
ADG202A Replaces DG202

SWITCHES SHOWN FOR A LOGIC "1" INPUT

GENERAL DESCRIPTION

The ADG201A and ADG202A are monolithic CMOS devices comprising four independently selectable switches. They are designed on an enhanced LC²MOS process which gives an increased signal handling capability of ±15V. These switches also feature high switching speeds and low R_{ON}.

The ADG201A and ADG202A consist of four SPST switches. They differ only in that the digital control logic is inverted. All devices exhibit break before make switching action. Inherent in the design is low charge injection for minimum transients when switching the digital inputs.

PRODUCT HIGHLIGHTS

1. **Extended Signal Range:**
These switches are fabricated on an enhanced LC²MOS process, resulting in high breakdown and an increased analog signal range of ±15V.
2. **Single Supply Operation:**
For applications where the analog signal is unipolar (0V to 15V), the switches can be operated from a single +15V supply.
3. **Low Leakage:**
Leakage currents in the range of 500pA make these switches suitable for high precision circuits. The added feature of Break before Make allows for multiple outputs to be tied together for multiplexer applications while keeping leakage errors to a minimum.

*COMMENT: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Only one Absolute Maximum Rating may be applied at any one time.

Power Dissipation (Any Package)

Up to $+75^\circ C$ 470mW
Derates above $+75^\circ C$ by 6mW/ $^\circ C$

Operating Temperature

Commercial (K Version) -40°C to +85°C
Industrial (B Version) -40°C to +85°C

Extended (T Version) -55°C to +125°C

Storage Temperature Range -65°C to +150°C

Lead Temperature (Soldering 10sec) +300°C

NOTE

¹Oversupply at IN, S or D will be clamped by diodes. Current should be limited to the Maximum Rating above.

CAUTION

ESD (electrostatic discharge) sensitive device. The digital control inputs are diode protected; however, permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. The protective foam should be discharged to the destination socket before devices are removed.

WARNING!
