

2-channel PRE/REC amplifier with auto-tracking interface BA7180AS/BA7180AFS

The BA7180AS and BA7180AFS are PRE/REC amplifiers developed for use in video cassette recorders. They have been designed for use in two-head decks and feature built-in FB damping, two preamplifiers, a chroma output amplifier, an FM output amplifier (with AGC), an envelope detector, a constant-current BTL-drive REC amplifier (with AGC) and built-in channel and REC/PB switches on a single monolithic IC.

● Applications

VCRs

● Features

- 1) The playback amplifier has a total gain of 57dB (Typ.), and has a low-noise preamplifier. Designed for VHS-band operation with low external parts count. The ICs have 2 circuits for 2-head VCR applications.
- 2) Two playback output systems (through output and AGC output). The AGC output level is 300mV_{P-P} (Typ.); suitable for FM brightness signal output.
- 3) Auto-tracking interface for automated tracking adjustment. The detector characteristic is non-linear to improve tracking accuracy during playback of low signal levels.
- 4) The recording amplifier uses constant-current BLT drive that handles load variations (i.e. head impedance) well, and gives stable recording characteristics. A single circuit is provided for 2-head VCR use.
- 5) Built-in recording level AGC means adjustment of FM recording current is not necessary.
- 6) Head switches for 2-channel PRE/REC system provided.
- 7) Operates off a single 5V power supply, with low power dissipation.
