Vocal fader IC with input selector
BH3810FS

The BH3810FS is a vocal feeder IC that is serial control compatible. It has mode switching that also includes a voice multiplexing mode, a five-input selector, a gain selector and other such features, which can all be controlled serially. Eight open-collector terminals and two tri-state terminals are provided on the chip to facilitate control by other ICs.

●Applications

Component stereo systems, CD radio cassette players, TVs and car stereos

●Features

1) Built-in low-pass filter can perform vocal fader function (erasing of vocals from commercially available music software) using just one chip.
2) Serial control can be used to switch between vocal fader, through, multiplex, and mute modes.
3) Built-in gain selector allows selection of gain from 6dB to 20dB in 2dB steps.

4) Five-channel input selector.
5) Mic. mixing amplifier with mute function. Key controller input also provided.
6) SSOP 32-pin package.

●Absolute maximum ratings (Ta=25℃)

| Parameter	Symbol	Limits	Unit
Applied voltages	V_{DD}	+5.5	V
	V_{EE}	−4.5	
Power dissipation	Pd	850 *	mW
Operating temperature	Topr	−40~+85	℃
Storage temperature	Tstg	−55~+125	℃
Maximum open collector voltage	V_{OP}	14	V

* Reduced by 8.5mW for each increase in Ta of 1℃ over 25℃ , when mounted on a 50mm × 50mm × 1.6mm board.

●Recommended operating conditions (Ta=25℃)

Parameter	Symbol	Limits	Unit
Power supply voltage	V_{DD}	4.0~5.3	V
	V_{EE}	−4.3~−3.0	V

●Block diagram

●Electrical characteristics (Unless otherwise specified, Ta=25°C, V_{DD}=5V, V_{EE}=−4V, G=14dB, f=1kHz, Rg=600 Ω, V_{IN}=150mV, and R_L=100k Ω)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Quiescent current	I_{Q1+}	—	4.5	10.0	mA	Through mode VDD current
	I_{Q1-}	—	4.1	10.0	mA	Through mode VEE current
	I_{Q2+}	—	10.0	20.0	mA	Through mode D9 to D16 data1
	I_{Q2-}	—	7.6	20.0	mA	Through mode D9 to D16 data1
Maximum output voltage	Vom	1.5	2.2	—	Vrms	THD = 1%, through mode
L, R gain	G_{VT}	11	14	17	dB	Through mode
Low-frequency gain	G_{VF}	8	11	14	dB	Through mode
Microphone gain	G_{VM}	5	8	11	dB	
Crosstalk	CT	54	64	—	dB	f = 1kHz, through mode
Mute attenuation	MU	60	80	—	dB	f = 1kHz, mute mode or input mute
Vocal suppression ratio	SV	15	20	—	dB	Vocal fader mode, f = 1kHz
Total harmonic distortion	THD	—	0.004	0.05	%	VO = 1Vrms, through mode, BW 400Hz to 30kHz
Noise level	V_N	—	15	22	μVrms	Rg=0, DIN AUDIO
Mode switch output DC differential	ΔDCB	—	0	18	mV	Between each mode with key controller on
Input impedance	R_{IN}	35	50	65	kΩ	1~5pin, 7pin, 26pin, 28~32pin
Input selector crosstalk	CT_{IN}	80	—	—	dB	f=1kHz
Port output current	$I_{PMax.}$	5.0	12	—	mA	Pins 17 to 24, 0.5V between PORT terminal and GND
"L" output voltage	V_{OL}	—	0.15	0.5	V	17~24pin, I_{OL}=5mA
"H" output leakage current	I_{OH}	—	0	2.0	μA	Pins 17 to 24, 13V applied to collector
Tri-state "H" output voltage	V_{SOH}	4.5	4.85	—	V	15, 16pin, Io=1mA
Tri-state "L" output voltage	V_{SOL}	—	0.05	0.5	V	15, 16pin, Io=1mA
SI pin source current (pin 13)	I_{SI}	—	0.4	10	μA	When SI pin is at DGND potential
SCK pin source current (pin 14)	I_{SCK}	—	0.2	10	μA	When SCK pin is at DGND potential

* Measured using a Matsushita VP-9690A (average value detector, effective value display) DIN AUDIO filter.
  Operating specifications: same phase for the input and output signals.
 Not designed for radiation resistance.

(2) Timing chart

Serial data timing (timing for the IC terminals)
* When LATCH is "H", the DATA signal is forced "L" internally.
* The read decision for the DATA signal (SI) is made by the signal when the CLOCK signal rises.
* The read decision for the LATCH signal (SI) is made by the signal when the LATCH signal itself rises.
* A "L" must follow at the end of each signal to wait for the next signal.

●Timing chart constants (Ta = 25°C, V_{DD} = 5V and V_{EE} = −4V)

Parameter	Symbol	Min.	Typ.	Max.	Unit
H input voltage	V_{IH}	4.0	5.0	6.0	V
M input voltage	V_{IM}	2.0	2.5	3.0	V
L input voltage	V_{IL}	−0.3	0	1.0	V
Minimum clock width	tw	2.0	—	—	μS
Minimum data width	tw (DATA)	4.0	—	—	μS
Minimum latch width	tw (LATCH)	2.0	—	—	μS
Setup time (DATA to CLK)	tsu	1.0	—	—	μS
Setup time (CLK to DATA)	th	1.0	—	—	μS
Setup time (DATA, CLK to LATCH)	ts	1.0	—	—	μS

* If the voltage between VDD and DGND changes, the values above will change.

●Application circuit
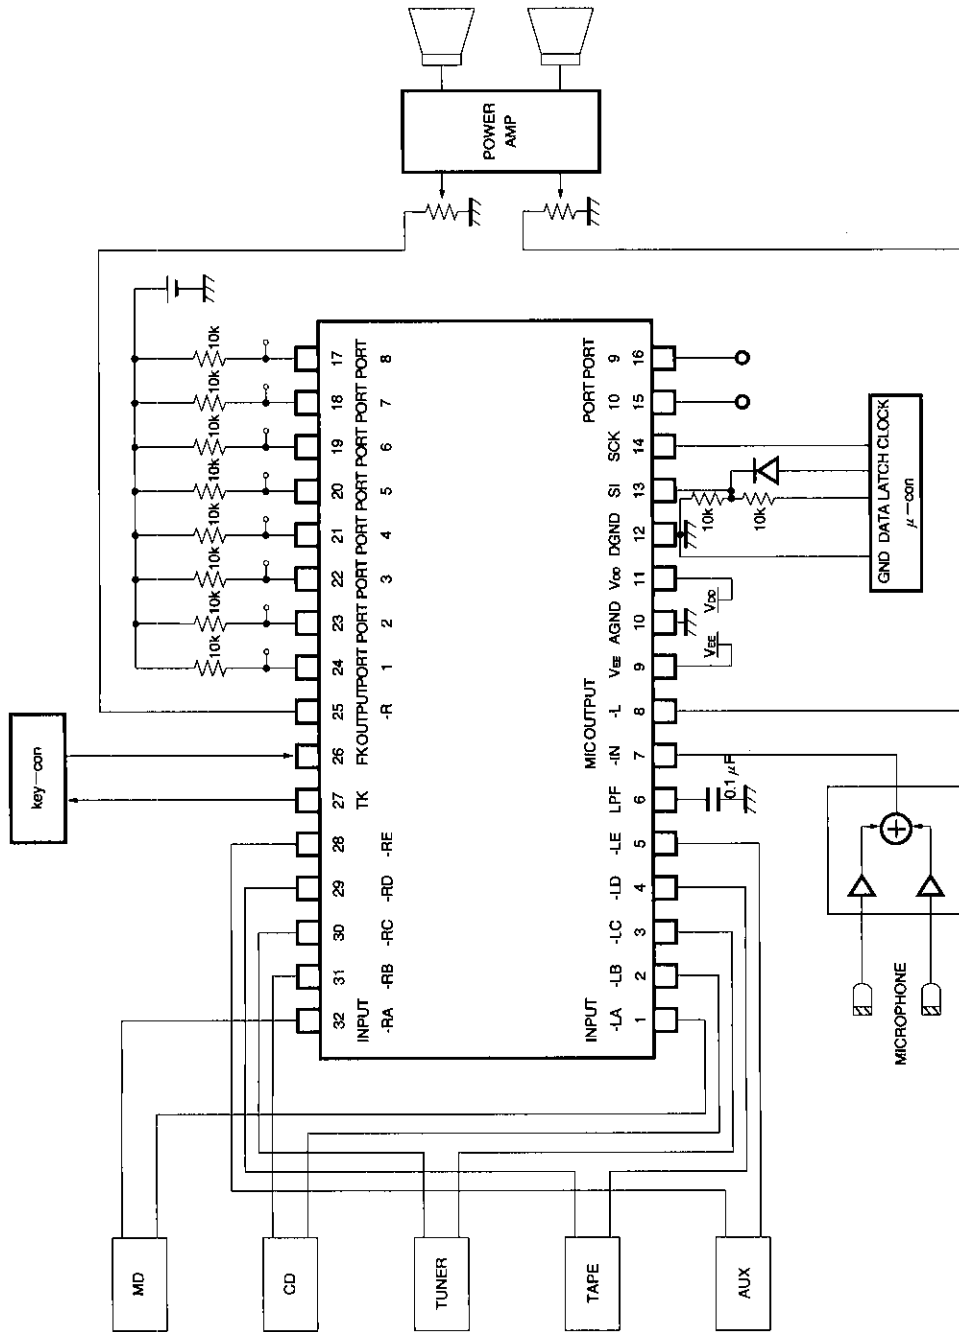

Fig. 4

●Operation notes

(1) We guarantee the application circuit design, but recommend that you thoroughly check its characteristics in actual use.

If you change any of the external component values, check both the static and transient characteristics of the circuit, and allow sufficient margin in your selections to take into account variations in the components and ICs.

Note that Rohm has not fully investigated patent rights regarding this product.

(2) The vocal fader function

The effect of the vocal fader is realized by negating the same-phase components. In the bass region, the first-stage low-pass filter leaves the source sound as is, even for the same-phase components. Therefore, depending on the music, the effect may be small.

(3) The low-pass filter that leaves the vocal fader bass

The low-pass filter is formed by connecting a capacitor to pin 6. A 20k Ω resistor (design value) and this capacitor set the cutoff frequency.

$$fc = \frac{1}{2\pi CR} \quad (Hz)$$

The optional attenuation of the first-stage low-pass filter frequency is :

$$A(f) = 20 \log \left(\sqrt{\frac{1}{1+(2\pi fCR)^2}} \right) \quad (dB) \qquad \left(\begin{array}{l} f: frequency \\ C: external\ capacitor \\ R: 20kohm\ (design\ value) \end{array} \right)$$

(4) AGND (pin 10) and DGND (pin 12)

AGND is the ground for the IC's internal analog circuits, and DGND is the ground for the internal ports 1 to 10. Connect the two grounds externally.

(5) Switching noise

If you are troubled by switching noise that occurs when the input selector, gain selector, or mode selector are switched, use muting, or some other appropriate countermeasure.

(6) Serial control

The LATCH and DATA serial signals are received on the same terminal, and the signals are differentiated by voltage level. A diode and resistor are connected to perform a conversion to logic voltage (0 to 5V). The threshold values will change depending on the external components, so select them carefully.

If the signals are not being received very well, connect a capacitor of about 100pF between the SI terminal (pin 13), and the DGND terminal (pin 12).

Notes

- The contents described in this catalogue are correct as of March 1997.
- No unauthorized transmission or reproduction of this book, either in whole or in part, is permitted.
- The contents of this book are subject to change without notice. Always verify before use that the contents are the latest specifications. If, by any chance, a defect should arise in the equipment as a result of use without verification of the specifications, ROHM CO., LTD., can bear no responsibility whatsoever.
- Application circuit diagrams and circuit constants contained in this data book are shown as examples of standard use and operation. When designing for mass production, please pay careful attention to peripheral conditions.
- Any and all data, including, but not limited to application circuit diagrams, information, and various data, described in this catalogue are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO., LTD., disclaims any warranty that any use of such device shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes absolutely no liability in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices; other than for the buyer's right to use such devices itself, resell or otherwise dispose of the same; no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by ROHM CO., LTD., is granted to any such buyer.
- The products in this manual are manufactured with silicon as the main material.
- The products in this manual are not of radiation resistant design.

The products listed in this catalogue are designed to be used with ordinary electronic equipment or devices (such as audio-visual equipment, office-automation equipment, communications devices, electrical appliances, and electronic toys). Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers, or other safety devices) please be sure to consult with our sales representatives in advance.

- Notes when exporting
    - It is essential to obtain export permission when exporting any of the above products when it falls under the category of strategic material (or labor) as determined by foreign exchange or foreign trade control laws.
    - Please be sure to consult with our sales representatives to ascertain whether any product is classified as a strategic material.
