

# System control servo

## BU38603/BU38703/BU38803

The BU38603, BU38703 and BU38803 are servo controller ICs for VCRs. They contain a high-speed, 8-bit CPU and perform the processing required for the drum, capstan, FV and PV completely in software, allowing a large reduction in the number of external components required. They also contain high-performance linear amplifiers, eliminating the need for interface ICs. Specialized hardware is included for items that require high-speed processing, to allow efficient utilization of the CPU.

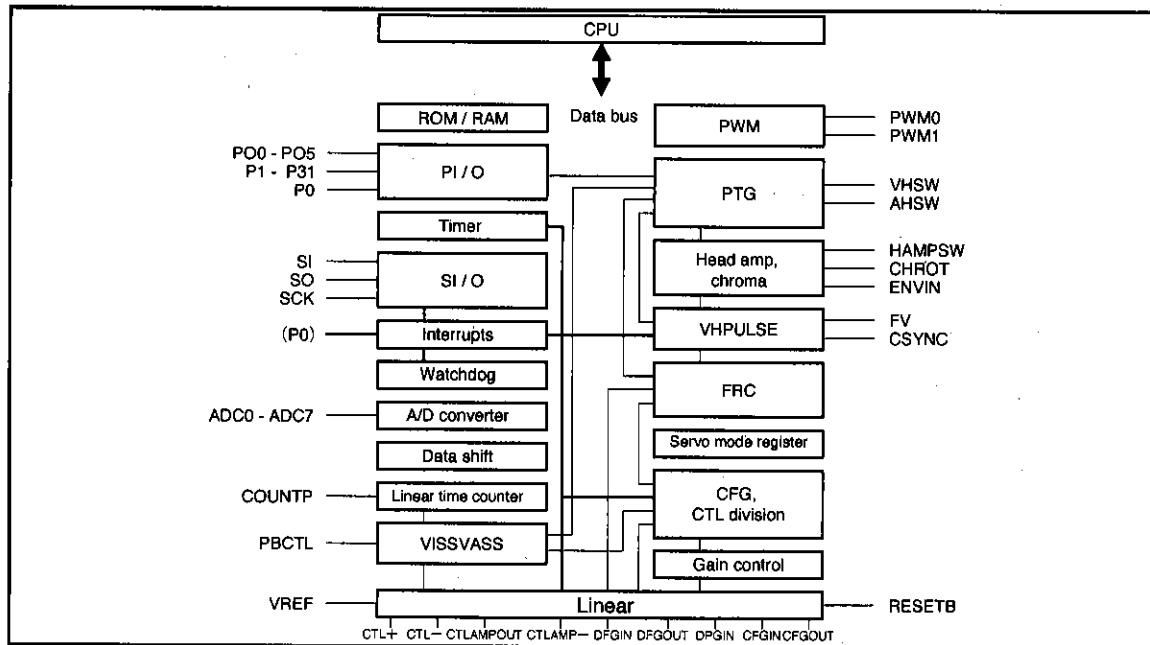

### ● Applications

VHS VCRs and camcorders.

### ● Features

- 1)CPU
  - 499 commands (69 types)
  - Memory-mapped I/O.
  - Minimum command execution time: 250nS (8MHz)
- 2)ROM capacity
  - BU38603: 16384 × 8 bit.
  - BU38703: 24576 × 8 bit.
  - BU38803: 32768 × 8 bit.
- 3)RAM capacity: 512 × 8 bit.
- 4)Interrupt
  - Pattern generator: 1
  - Watchdog timer: 1
  - External interrupts: 1
  - FG interrupts: 5
  - Internal interrupts: 8
  - Two timers, serial transmission, software interrupt, VHSW, CTL interval timer (fixed)/VISS
  - ※Multi-layer interrupts possible.
- 5)Free-running counter: 19 bit
- 6)PWM output: 12 bit × 2
- 7)Pattern generator
  - 17 bits from FRC MSB used.
  - Output
    - Internal: 3 bit
    - External (PO): 5 bit
    - External (PIO): 6 bit
- 8)Programmable pre-scaler
  - CFG: 7 bit
  - CTL: 6 bit
- 9)Head amplifier/chroma rotary
  - Generated from pattern generator output.
- 10)Built-in AGC. Five-bits used to switch the gain control registers for the CTL amplifier.
- 11)CTL counter: 1/30 or 1/25
- 12>Data shift PLL calculation: 24 bit
- 13)Timer: 8 bit × 2
- 14>Synchronous serial input/output: 8 bit × 1
- 15)VH PULSE
  - V separated from composite synchronous signal.
  - Pseudo V generated from pattern generator output.
  - Superimposed pseudo H synchronized with the composite synchronous signal.
- 16)VISS/VASS
  - VASS 0/1 discrimination
  - VISS discrimination threshold: 3
  - Aspect discrimination.
  - D/A CTL switching.
- 17)Standard I/O
  - Parallel I/O (PIO): 32 bits
  - Parallel output (PO): 6 bits
- 18)A/D converter: 8 bits × 8 channels
  - Can be masked-programmed to be parallel inputs.
- 19)Watchdog timer
  - Setting period: 4
- 20)Linear circuits
  - DFG: amplifier/comparator
  - CFG: amplifier/comparator
  - CTL: differential amplifier/comparator
  - DPG: comparator

● Block diagram

System control servos

VCR components

● Absolute maximum ratings ( $T_a=25^\circ\text{C}$ )

| Parameter           | Symbol                     | Limits                       | Unit |
|---------------------|----------------------------|------------------------------|------|
| Applied voltage     | $V_{DD}, V_{DDA}, V_{DAD}$ | 0.3~7.0 *2                   | V    |
| Input voltage       | $V_{IN}$                   | $V_{SS}-0.3 \sim V_{DD}+0.3$ | V    |
| Power dissipation   | $P_d$                      | 500 *1                       | mW   |
| Storage temperature | $T_{STG}$                  | -55~125                      | °C   |

\*1 Reduced by 5mW for each increase in  $T_a$  of  $1^\circ\text{C}$  over  $25^\circ\text{C}$ .

\*2 Use with  $V_{SS} = V_{SSA} = V_{SAD}$ , and  $V_{DD} = V_{DDA} = V_{DAD}$ .

● Recommended operating conditions

| Parameter             | Symbol                     | Limits  | Unit |
|-----------------------|----------------------------|---------|------|
| Power supply voltage  | $V_{DD}, V_{DDA}, V_{DDB}$ | 4.5~5.5 | V    |
| Clock frequency       | $f_{CK}$                   | 8       | MHz  |
| Operating temperature | $T_{OPR}$                  | -25~75  | °C   |

## ●Pin description

| Pin No. | Pin name  | Function   | Pin No. | Pin name | Function                            |
|---------|-----------|--|---------|----------|-------------------------------------|
| 1       | VSAD      | A/D convertor circuit GND.   | 41      | CHROT    | Chroma rotary switch output         |
| 2       | ADC0      |  | 42      | FV       | Pseudo Vsync output                 |
| 3       | ADC1      |  | 43      | VDD      | Logic circuit power supply          |
| 4       | ADC2      | Can be optionally mask-programmed to be either A/D or parallel inputs. | 44      | PWM0     | PWM output                          |
| 5       | ADC3      |  | 45      | PWM1     |                                     |
| 6       | ADC4      |  | 46      | P21      |                                     |
| 7       | ADC5      |  | 47      | P20      |                                     |
| 8       | ADC6      |  | 48      | P19      |                                     |
| 9       | ADC7      |  | 49      | P18      |                                     |
| 10      | VDAD      | A/D convertor circuit power supply.                                    | 50      | P17      |                                     |
| 11      | DFGOUT    | Drum FG amplifier output   | 51      | P16      | Parallel I/O                        |
| 12      | DFGIN     | Drum FG amplifier input  | 52      | P15      |                                     |
| 13      | DPGIN     | Drum PG comparator input   | 53      | P14      |                                     |
| 14      | CFGIN     | Capstan FG amplifier input   | 54      | P13      |                                     |
| 15      | CFGOUT    | Capstan FG amplifier output  | 55      | P12      |                                     |
| 16      | VSSA      | Linear circuit GND   | 56      | P11      |                                     |
| 17      | VREF      | Internal BIAS and power-on reset pin                                   | 57      | P10      |                                     |
| 18      | CTLAMP-   | CTL amplifier - input  | 58      | P9       |                                     |
| 19      | CTLAMPOUT | CTL amplifier output   | 59      | PO2      | Parallel output                     |
| 20      | CTL-      | CTL coil - connection  | 60      | PO1      |                                     |
| 21      | CTL+      | CTL coil + connection  | 61      | PO0      |                                     |
| 22      | VDDA      | Linear circuit power supply  | 62      | CLOCKO   | For connection of oscillator        |
| 23      | RESETB    | Power supply reset   | 63      | CLOCKI   |                                     |
| 24      | TEST      | Test mode input (normally GND)   | 64      | VSS      | Logic circuit GND                   |
| 25      | PO5       | Parallel output  | 65      | P8       |                                     |
| 26      | PO4       |  | 66      | P7       |                                     |
| 27      | P31       |  | 67      | P6       | Parallel I/O                        |
| 28      | P30       |  | 68      | P5       |                                     |
| 29      | P29       | Parallel I/O   | 69      | P4       |                                     |
| 30      | P28       |  | 70      | P3       |                                     |
| 31      | P27       |  | 71      | P2       |                                     |
| 32      | P26       |  | 72      | P1       |                                     |
| 33      | P25       |  | 73      | P0       | Parallel I/O and external interrupt |
| 34      | P24       |  | 74      | SI       | Serial I/O data input               |
| 35      | P23       |  | 75      | SO       | Serial I/O1 data I/O                |
| 36      | P22       |  | 76      | SCK      | Serial I/O clock I/O                |
| 37      | PO3       | Parallel output and pattern generator output                           | 77      | ENVIN    | Envelope detector logic input       |
| 38      | VHSW      | Pattern generator VHSW output  | 78      | CSYNC    | Composite signal logic input        |
| 39      | AHSW      | Pattern generator AHSW output  | 79      | COUNTP   | CTL counter pulse output            |
| 40      | HAMPSW    | Head amplifier switch output   | 80      | PBCTL    | CTL logic output                    |

## ●Electrical characteristics (Unless otherwise specified: Ta=25°C, VDD=5V and fosc=8MHz)

| Parameter                    | Symbol            | Min. | Typ. | Max. | Unit | Conditions  | Measurement Circuit |
|------------------------------|-------------------|------|------|------|------|---|---------------------|
| [Logic block]                |                   |      |      |      |      | (Logic: pins 24 to 80)                                  |                     |
| Circuit current              | I <sub>DD</sub>   | —    | 12   | 19   | mA   | No load, when reset                                     | Fig.1               |
| <Logic I/O>                  |                   |      |      |      |      |   |                     |
| Output "H" voltage           | V <sub>H</sub>    | 4.0  | 4.5  | —    | V    | I=2mA: except pins 66 to 73<br>I=1mA : 66~73pin         | Fig.2               |
| Output "L" voltage           | V <sub>L</sub>    | —    | 0.5  | 1.0  | V    | I=2mA   | Fig.2               |
| Max. current when "L" output | I <sub>LL</sub>   | 10.0 | 16.0 | —    | mA   | 66~73pin  | Fig.2               |

## Notes

- The contents described in this catalogue are correct as of March 1997.
- No unauthorized transmission or reproduction of this book, either in whole or in part, is permitted.
- The contents of this book are subject to change without notice. Always verify before use that the contents are the latest specifications. If, by any chance, a defect should arise in the equipment as a result of use without verification of the specifications, ROHM CO., LTD., can bear no responsibility whatsoever.
- Application circuit diagrams and circuit constants contained in this data book are shown as examples of standard use and operation. When designing for mass production, please pay careful attention to peripheral conditions.
- Any and all data, including, but not limited to application circuit diagrams, information, and various data, described in this catalogue are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO., LTD., disclaims any warranty that any use of such device shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes absolutely no liability in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices; other than for the buyer's right to use such devices itself, resell or otherwise dispose of the same; no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by ROHM CO., LTD., is granted to any such buyer.
- The products in this manual are manufactured with silicon as the main material.
- The products in this manual are not of radiation resistant design.

The products listed in this catalogue are designed to be used with ordinary electronic equipment or devices (such as audio-visual equipment, office-automation equipment, communications devices, electrical appliances, and electronic toys). Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers, or other safety devices) please be sure to consult with our sales representative in advance.

- Note when exporting

- It is essential to obtain export permission when exporting any of the above products when it falls under the category of strategic material (or labor) as determined by foreign exchange or foreign trade control laws.
- Please be sure to consult with our sales representatives to ascertain whether any product is classified as a strategic material.
