3.3 V and 2.5 V LVCMOS High-Performance Clock Buffer Family

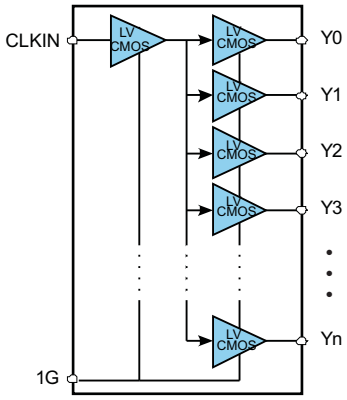
Check for Samples: CDCLVC11xx

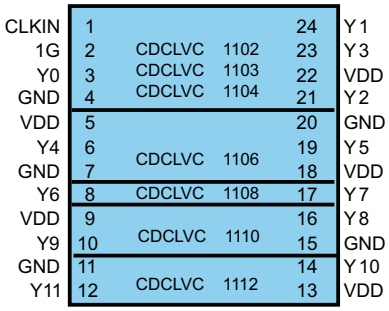
FEATURES

- **High-Performance 1:2, 1:3, 1:4, 1:6, 1:8, 1:10, 1:12 LVCMOS Clock Buffer Family**
- **Very Low Pin-to-Pin Skew < 50 ps**
- **Very Low Additive Jitter < 100 fs**
- **Supply Voltage: 3.3 V or 2.5 V**
- **f_{max} = 250 MHz for 3.3 V**
  f_{max} = 180 MHz for 2.5 V
- **Operating Temperature Range: –40°C to 85°C**
- **Available in 8-, 14-, 16-, 20-, 24-Pin TSSOP Package (all pin compatible)**

APPLICATIONS

- **General Purpose Communication, Industrial and Consumer Applications**





DESCRIPTION

The CDCLVC11xx is a modular, high-performance, low-skew, general purpose clock buffer family from Texas Instruments.

The whole family is designed with a modular approach in mind. It is intended to round up TI's series of LVCMOS clock generators.

There are 7 different fan-out variations, 1:2 to 1:12, available. All of the devices are pin compatible to each other for easy handling.

All family members share the same high performing characteristics like low additive jitter, low skew, and wide operating temperature range.

The CDCLVC11xx supports an asynchronous output enable control (1G) which switches the outputs into a low state when 1G is low. Also, versions with synchronized enable control for glitch free switching and three-state outputs are planned in future device options.

The CDCLVC11xx operate in a 2.5 V and 3.3 V environment and are characterized for operation from –40°C to 85°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

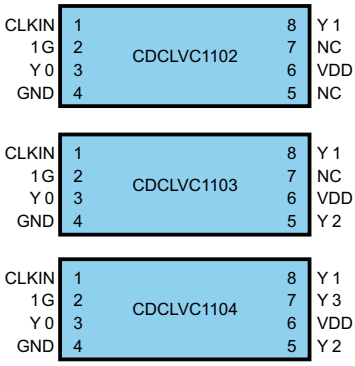
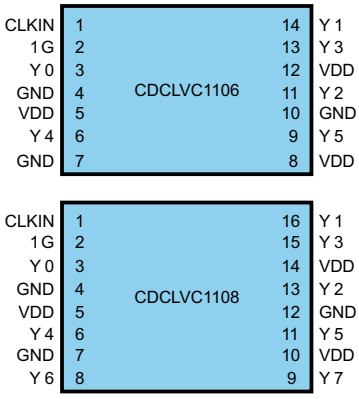
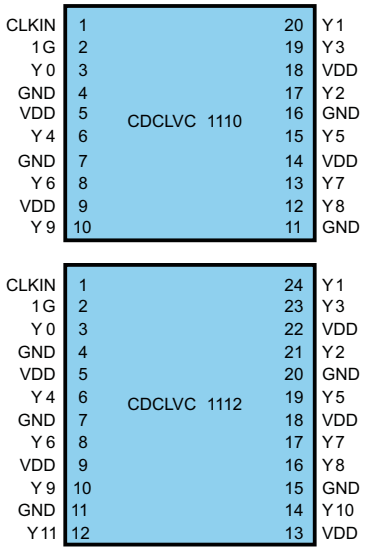
These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

PACKAGE OPTIONS







PIN FUNCTIONS

DEVICES	LVCMOS CLOCK INPUT	CLOCK OUTPUT ENABLE	LVCMOS CLOCK OUTPUT	SUPPLY VOLTAGE	GROUND

ABSOLUTE MAXIMUM RATINGS(1)

over operating free-air temperature range (unless otherwise noted)

		VALUE / UNIT
V_{DD}	Supply voltage range	–0.5 V to 4.6 V
V_{IN}	Input voltage range (2)	–0.5 V to V_{DD} + 0.5 V
V_O	Output voltage range (2)	–0.5 V to V_{DD} + 0.5 V
I_{IN}	Input current	±20 mA
I_O	Continuous output current	±50 mA
T_J	Maximum junction temperature	125°C
T_{ST}	Storage temperature range	–65°C to 150°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) This value is limited to 4.6 V maximum.

THERMAL INFORMATION

THERMAL METRIC(1)		DCDLVC1102/03/04	CDCLVC1106	CDCLVC1108	CDCLVC11010	CDCLVC1112	UNITS
		PW	PW	PW	PW	PW	
		8 PINS	14 PINS	16 PINS	20 PINS	24 PINS	
θ_{JA}	Junction-to-ambient thermal resistance(2)	149.4	112.6	108.4	83.0	87.9	°C/W
$\theta_{JC(top)}$	Junction-to-case(top) thermal resistance (3)	69.4	48.0	33.6	32.3	26.5	

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.
(2) The junction-to-ambient thermal resistance under natural convection is obtained in a simulation on a JEDEC-standard, high-K board, as specified in JESD51-7, in an environment described in JESD51-2a.
(3) The junction-to-case (top) thermal resistance is obtained by simulating a cold plate test on the package top. No specific JEDEC-standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.

RECOMMENDED OPERATING CONDITIONS

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V_{DD}	Supply voltage range	3.3 V supply	3.0	3.3	3.6	V
		2.5 V supply	2.3	2.5	2.7	
V_{IL}	Low-level input voltage	V_{DD} = 3.0 V to 3.6 V			$V_{DD}/2 – 600$	mV
		V_{DD} = 2.3 V to 2.7 V			$V_{DD}/2 – 400$	
V_{IH}	High-level input voltage	V_{DD} = 3.0 V to 3.6 V	$V_{DD}/2 + 600$			mV
		V_{DD} = 2.3 V to 2.7 V	$V_{DD}/2 + 400$			
V_{th}	Input threshold voltage	V_{DD} = 2.3 V to 3.6 V		$V_{DD}/2$		mV
t_r / t_f	Input slew rate		1		4	V/ns
t_w	Minimum pulse width at CLKIN	V_{DD} = 3.0 V to 3.6 V	1.8			ns
		V_{DD} = 2.3 V to 2.7 V	2.75			
f_{CLK}	LVCMOS clock Input Frequency	V_{DD} = 3.0 V to 3.6 V	DC		250	MHz
		V_{DD} = 2.3 V to 2.7 V	DC		180	
T_A	Operating free-air temperature		–40		85	°C

DEVICE CHARACTERISTICS

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		CONDITION	MIN	TYP(1)	MAX	UNIT
OVERALL PARAMETERS FOR ALL VERSIONS						
I_{DD}	Static device current(2)	1G = V_{DD}; CLKIN = 0 V or V_{DD}; I_O = 0 mA; V_{DD} = 3.6 V		6	10	mA
		1G = V_{DD}; CLKIN = 0 V or V_{DD}; I_O = 0 mA; V_{DD} = 2.7 V		3	6	mA
I_{PD}	Power down current	1G = 0 V; CLKIN = 0 V or V_{DD}; I_O = 0 mA; V_{DD} = 3.6 V or 2.7 V			60	µA
C_{PD}	Power dissipation capacitance per output(3)	V_{DD} = 3.3 V; f = 10 MHz		6		pF
		V_{DD} = 2.5 V; f = 10 MHz		4.5		pF
I_I	Input leakage current at 1G	V_I = 0 V or V_{DD}, V_{DD} = 3.6 V or 2.7 V			± 8	µA
	Input leakage current at CLKIN				± 25	
R_{OUT}	Output impedance	V_{DD} = 3.3 V		45		Ω
		V_{DD} = 2.5 V		60		Ω
f_{OUT}	Output frequency	V_{DD} = 3.0 V to 3.6 V	DC		250	MHz
		V_{DD} = 2.3 V to 2.7 V	DC		180	MHz
OUTPUT PARAMETERS FOR V_{DD} = 3.3 V ± 0.3 V						
V_{OH}	High-level output voltage	V_{DD} = 3 V, I_{OH} = –0.1 mA	2.9			V
		V_{DD} = 3 V, I_{OH} = –8 mA	2.5			
		V_{DD} = 3 V, I_{OH} = –12 mA	2.2			
V_{OL}	Low-level output voltage	V_{DD} = 3 V, I_{OL} = 0.1 mA			0.1	V
		V_{DD} = 3 V, I_{OL} = 8 mA			0.5	
		V_{DD} = 3 V, I_{OL} = 12 mA			0.8	
t_{PLH}, t_{PHL}	Propagation delay	CLKIN to Yn	0.8		2.0	ns
$t_{sk(o)}$	Output skew	Equal load of each output			50	ps
t_r/t_f	Rise and fall time	20%–80% (V_{OH} - V_{OL})	0.3		0.8	ns
t_{DIS}	Output disable time	1G to Yn			6	ns
t_{EN}	Output enable time	1G to Yn			6	ns
$t_{sk(p)}$	Pulse skew ; $t_{PLH(Yn)} - t_{PHL(Yn)}$ (4)	To be measured with input duty cycle of 50%			180	ps
$t_{sk(pp)}$	Part-to-part skew	Under equal operating conditions for two parts			0.5	ns
t_{jitter}	Additive jitter rms	12kHz…20 MHz, f_{OUT} = 250 MHz			100	fs

(1) All typical values are at respective nominal V_{DD}. For switching characteristics, outputs are terminated to 50 Ω to V_{DD}/2 (see Figure 1).
(2) For dynamic I_{DD} over frequency see Figure 8 and Figure 9.
(3) This is the formula for the power dissipation calculation (see Figure 8 and the Power Consideration section).
$P_{tot} = P_{stat} + P_{dyn} + P_{Cload}$ [W]
$P_{stat} = V_{DD} \times I_{DD}$ [W]
$P_{dyn} = C_{PD} \times V_{DD}2 \times f$ [W]
$P_{Cload} = C_{load} \times V_{DD}2 \times f \times n$ [W]
n = Number of switching output pins
(4) $t_{sk(p)}$ depends on output rise- and fall-time (t_r/t_f). The output duty-cycle can be calculated: odc = ($t_{w(OUT)} \pm t_{sk(p)}$)/t_{period}; $t_{w(OUT)}$ is pulse-width of output waveform and tperiod is 1/f_{OUT}.

TYPICAL CHARACTERISTICS

Power Consideration

The following power consideration refers to the device-consumed power consumption only. The device power consumption is the sum of static power and dynamic power. The dynamic power usage consists of two components:

1. Power used by the device as it switches states.
2. Power required to charge any output load.

The output load can be capacitive only or capacitive and resistive. The following formula and the power graphs in Figure 8 and Figure 9 can be used to obtain the power consumption of the device:

$P_{dev} = P_{stat} + n\ (P_{dyn} + P_{Cload})$
$P_{stat} = V_{DD} \times I_{DD}$
$P_{dyn} + P_{Cload}$ = see Figure 8 and Figure 9

where:

V_{DD} = Supply voltage (3.3 V or 2.5 V)
I_{DD} = Static device current (typ 6 mA for V_{DD} = 3.3 V; typ 3 mA for V_{DD} = 2.5 V)
n = Number of switching output pins

Example for Device Power Consumption for CDCLVC1104: 4 outputs are switching, f = 120 MHz, V_{DD} = 3.3 V and C_{load} = 2 pF per output:

$P_{dev} = P_{stat} + n\ (P_{dyn} + P_{Cload})$ = 19.8 mW + 40 mW = 59.8 mW
$P_{stat} = V_{DD} \times I_{DD}$ = 6 mA x 3.3 V = 19.8 mW
$n\ (P_{dyn} + P_{Cload})$ = 4 x 10 mW = 40 mW

NOTE

For dimensioning the power supply, the total power consumption needs to be considered. The total power consumption is the sum of the device power consumption and the power consumption of the load.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

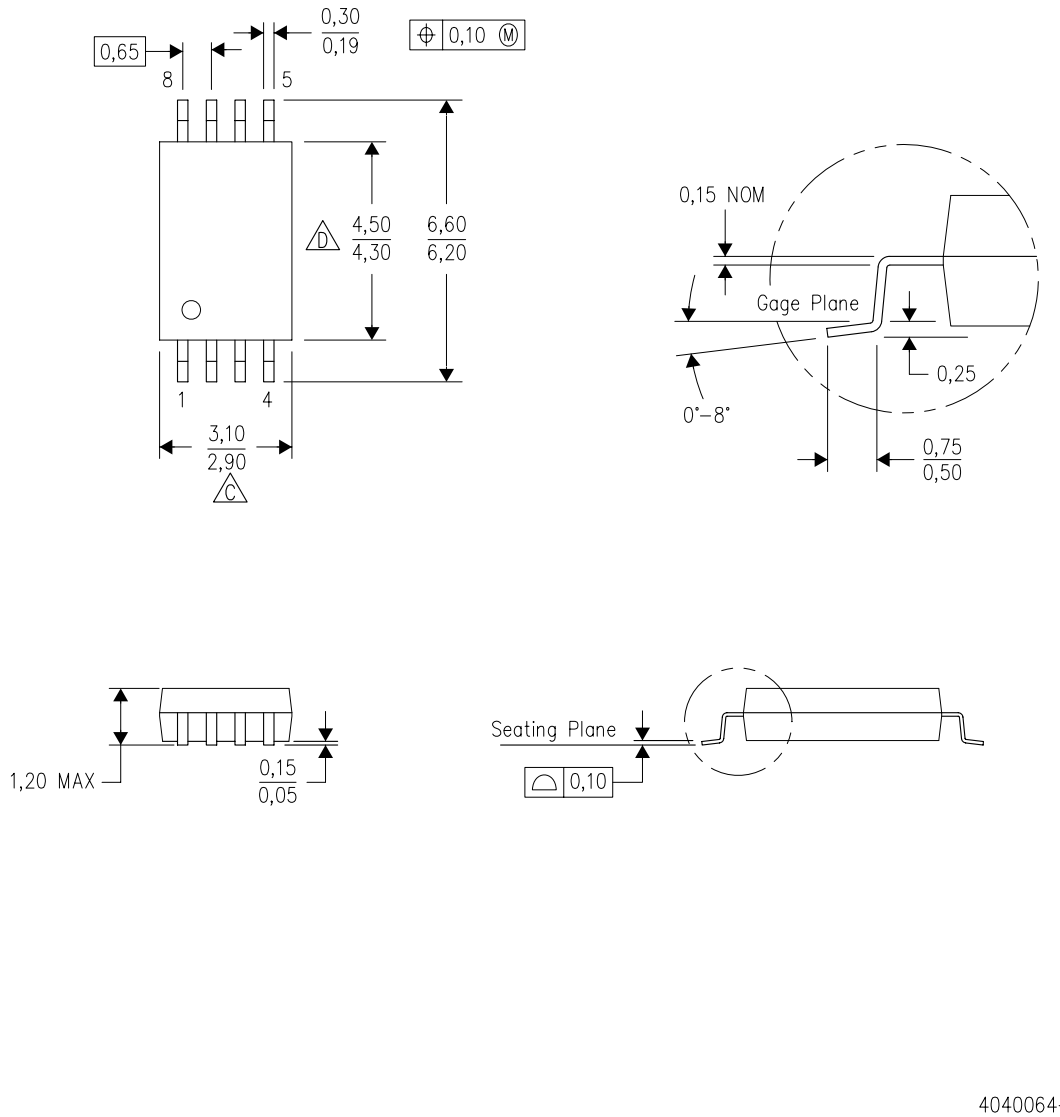
PW (R–PDSO–G8) PLASTIC SMALL OUTLINE



4040064–2/G 02/11

NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
E. Falls within JEDEC MO–153

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
