

4ch. Read/Write Amplifier for Thin Film Head of Hard Disk Drive**Description**

The CXA3092N is a Read/Write Amplifier for the thin film head of hard disk drive and designed to handle up to 4 channel heads.

Features

- Operate on single +5 V power supply
- Low power consumption

Read : 85 mW

Write : 115 mW + $I_w \times 5$

Idle : 8 mW

- Designed for two terminal thin-film or MIG heads
- Read amplifier emitter follower output featuring 325 times gain (typ).
- Differential input capacitance for Read : 6pF (typ)
- Input noise : 0.47 nV / $\sqrt{\text{Hz}}$ (typ)
- Write current range : 5 to 15 mA
- Differential Head voltage swing : 6.8 Vp-p (typ)
- Differential P-ECL write data input
- Built-in write unsafe detection circuit.
- Built-in Servo write function (2/4 ch).
- Built-in IC protection circuit for short of head to GND.
- Read data outputs are high impedance in write mode.
- Unselected head voltage is GND potential.
- Built-in supply voltage monitor circuit prohibits incorrect write during power on or abnormal voltage.
- Self switching damping resistance ($R_D = 350 \Omega$).

Function

Read, Write and Write unsafe detection for HDD, power supply ON/OFF detection.

Structure

Bipolar silicon monolithic IC

20 pin SSOP (Plastic)

**Absolute Maximum Ratings (Ta=25 °C)**

• Supply voltage	Vcc	6	V
• Write current	I_w	20	mAo-p
• Operating temperature	Topr	-20 to +75	°C
• Storage temperature	Tstg	-55 to +150	°C
• Allowable power dissipation	P_D	800	mW
• WUS/SE pin input current	I_{SEH}	15	mA

Recommended Operating Conditions

• Supply voltage	Vcc	5.0 V±10	%
• Write current	I_w	5 to 15	mAo-p

Block Diagram and Pin Configuration

Pin Description

No.	Symbol	Equivalent circuit	Description
1	GND		
2 3 4 5 6 7 8 9	H0X H0Y H1X H1Y H2X H2Y H3X H3Y		Head. 4 channels provided.
10	Vcc		5 V power supply.
11	WUS/SE		Write unsafe detection output / Servo Enable signal input.
12 13	WDY wdx		Differential P-ECL write data input.

No.	Symbol	Equivalent circuit	Description
14 15	HS1 HS0		Head select signal input. Selects one of 4 heads according to Table 2.
16 17	RDX RDY		Read Amplifier output.
18	WC		A setting resistor for the write current value is connected between this pin and GND.
19	R/W		Read/Write signal input At "High" : Read, at "Low" : Write.
20	XCS		Power save signal input At "High" : Power save.

Electrical Characteristics(Unless otherwise specified, $V_{CC}=5\text{ V}$, $T_a=25^\circ\text{C}$, Write current $I_W=15\text{ mA}$)

Description of Functions

Read amplifier

This is a low noise amplifier for amplifying the signals from the heads with an emitter follower output.

The RDX and RDY are the outputs of the differential amplifier whose polarity between the RDX and X side of the head input is same.

Write circuit

The Write data input to WDX pin and WDY pin passes through the buffer amp. It drives the Write switch circuit which supplies the Write current to the heads.

The Write current flows into the X side when WDX is "Low" and WDY is "High".

Mode control

The mode are set as shown Table 1 by XCS, R/W and WUS/SE.

XCS	R/W	WUS/SE	HS0	HS1	Mode
L	L	X	See Table 2		Write
L	H	X			Read
L	L	**	See Table 3		Servo Write
H	X	X	X	X	Idle

Table 1. Mode selection

Head selection

The heads are selected as shown in Table 2 by the HS0 and HS1 pins.

HS0	HS1	Head
L	L	0
H	L	1
L	H	2
H	H	3

Table 2. Head selection

Servo write mode **

This mode allows for writing to multiple channels at once.

To enable servo write mode follow these steps:

- (1) Place the device in the Read mode.
- (2) Set HS0 and HS1 following Table 3.
- (3) Set WUS/SE to V_{SEH}, or input I_{SEH} to WUS/SE.
- (4) While maintaining step (2) and (3) above make R/W low, placing the device in servo write mode.

Write unsafe detection circuit

This circuit detects write errors.

In normal Write mode, the WUS output is low; in the conditions listed below, it is high.

- Head inputs is open (under the condition which. $RH=\infty$ and Write data frequency is ≤ 10 MHz)
- Head input is shorted to GND or VCC.
- Write data frequency is abnormally low.
- No write current.
- In read mode.
- Supply voltage is abnormal (see power supply ON/OFF detection).

Power supply ON/OFF detection

This circuit monitors Vcc to detect erroneous Writes. The error status is established when Vcc falls below the threshold voltage (Vth) of the power supply ON/OFF detector, in which case the recording and playback functions are prohibited. When Vcc rises above, VTH, the prohibition of these functions is released.

HS0	HS1	Head
L	L	0, 1
H	L	0, 1, 2, 3
L	H	2, 3
H	H	0, 1, 2, 3

Table 3. Head selection in Servo Write mode

Application Circuit

Application circuits shown are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits or for any infringement of third party patent and other right due to same.

Notes on operation

- This device handles high frequency and high gain signals. Please note the following;
 - ◆ Connect Vcc decoupling capacitor of approximately 1000 pF near the device.
 - ◆ Make the GND area as large as possible.
- When using as 2-channel, short-circuit the X and Y sides of unused head pins or leave them open.
- The WC pin is a constant voltage pin. When noise affects this pin, it creates noise in Write current. Therefore, locate Rwc as close to the device as possible.
- Write unsafe detection circuit

This circuit uses the voltage waveforms of the head pins for detection.

- ◆ V_{FB} must be more than 2 V. When $V_{FB} < 2$ V, it is possible that Write unsafe detection maximum frequency becomes more than 1 MHz.
- ◆ The normal operating area of write unsafe detection circuit is changed by head inductance, head DC resistance, write current and other.

Application Notes

Use the following characteristics for reference.

Vcc=5V, Ta=25 °C

Item		Symbol	Conditions	Min.	Typ.	Max.	Unit
Write mode	Differential output capacitance	Co	Between head input pins			10	pF
	Differential output resistance	Ro		260	350	440	Ω
Read mode	Differential input capacitance	Ci	Between head input pins f=5 MHz		6	10	pF
	Differential input resistance	Ri		0.6	1.2		kΩ
	Output resistance	R _{RD}	RDX or RDY, f=5 MHz			50	Ω
Unselected head differential current in Write mode		I _{us}	L _H =1 μH, R _H =30 Ω I _w =15 mA			0.2	mAp-p
Write current symmetry		T _{AS} *	L _H =0 μH, R _H =0 Ω I _w =15 mA	-0.5		0.5	ns

*T_{AS}=T₁-T₂**Setting of Write current**Write current can be set with resistor R_{wc} (kΩ) at Pin 18.I_w=K/R_{wc} (mA) Refer to Fig. 5.Fig.5 Write current vs. R_{wc}

Package Outline Unit : mm

20PIN SSOP(PLASTIC)

PACKAGE STRUCTURE

SONY CODE	SSOP-20P-L122
EIAJ CODE	SSOP020-P-0300
JEDEC CODE	_____

PACKAGE MATERIAL	EPOXY RESIN
LEAD TREATMENT	PALLADIUM PLATING
LEAD MATERIAL	COPPER ALLOY
PACKAGE MASS	0.15g

NOTE : PALLADIUM PLATING

This product uses PdPPF (Palladium Pre-Plated Lead Frame).
