

## DAC0800/DAC0801/DAC0802 8-Bit Digital-to-Analog Converters

### General Description

The DAC0800 series are monolithic 8-bit high-speed current-output digital-to-analog converters (DAC) featuring typical settling times of 100 ns. When used as a multiplying DAC, monotonic performance over a 40 to 1 reference current range is possible. The DAC0800 series also features high compliance complementary current outputs to allow differential output voltages of 20 V<sub>p-p</sub> with simple resistor loads as shown in Figure 1. The reference-to-full-scale current matching of better than  $\pm 1$  LSB eliminates the need for full-scale trims in most applications while the nonlinearities of better than  $\pm 0.1\%$  over temperature minimizes system error accumulations.

The noise immune inputs of the DAC0800 series will accept TTL levels with the logic threshold pin, V<sub>LC</sub>, grounded. Changing the V<sub>LC</sub> potential will allow direct interface to other logic families. The performance and characteristics of the device are essentially unchanged over the full  $\pm 4.5$  V to  $\pm 18$  V power supply range; power dissipation is only 33 mW with  $\pm 5$  V supplies and is independent of the logic input states.

The DAC0800, DAC0802, DAC0800C, DAC0801C and DAC0802C are a direct replacement for the DAC-08, DAC-08A, DAC-08C, DAC-08E and DAC-08H, respectively.

### Features

- Fast settling output current 100 ns
- Full scale error  $\pm 1$  LSB
- Nonlinearity over temperature  $\pm 0.1\%$
- Full scale current drift  $\pm 10$  ppm/ $^{\circ}$ C
- High output compliance  $-10$  V to  $+18$  V
- Complementary current outputs
- Interface directly with TTL, CMOS, PMOS and others
- 2 quadrant wide range multiplying capability
- Wide power supply range  $\pm 4.5$  V to  $\pm 18$  V
- Low power consumption 33 mW at  $\pm 5$  V
- Low cost

### Typical Applications

TL/H/5686-1

**Note 1:** Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its specified operating conditions.

**Note 2:** The maximum junction temperature of the DAC0800, DAC0801 and DAC0802 is 125°C. For operating at elevated temperatures, devices in the Dual-In-Line J package must be derated based on a thermal resistance of 100°C/W, junction-to-ambient, 175°C/W for the molded Dual-In-Line N package and 100°C/W for the Small Outline M package.

**Note 3:** Human body model, 100 pF discharged through a 1.5 k $\Omega$  resistor.

**Note 4:** Pin-out numbers for the DAC080X represent the Dual-In-Line package. The Small Outline package pin-out differs from the Dual-In-Line package.

# Typical Performance Characteristics

## Full Scale Current vs Reference Current

## LSB Propagation Delay Vs I\_FS

## Reference Input Frequency Response

Curve 1:  $C_C = 15$  pF,  $V_{IN} = 2$  Vp-p centered at 1V.

Curve 2:  $C_C = 15$  pF,  $V_{IN} = 50$  mVp-p centered at 200 mV.

Curve 3:  $C_C = 0$  pF,  $V_{IN} = 100$  mVp-p at 0V and applied through 50  $\Omega$  connected to pin 14. 2V applied to R14.

## Reference Amp Common-Mode Range

Note. Positive common-mode range is always  $(V+) - 1.5V$ .

## Logic Input Current vs Input Voltage

## V\_TH - V\_LC vs Temperature

## Output Current vs Output Voltage (Output Voltage Compliance)

## Output Voltage Compliance vs Temperature

## Bit Transfer Characteristics

TL/H/5686-3

Note. B1-B8 have identical transfer characteristics. Bits are fully switched with less than  $\frac{1}{2}$  LSB error, at less than  $\pm 100$  mV from actual threshold. These switching points are guaranteed to lie between 0.8 and 2V over the operating temperature range ( $V_{LC} = 0V$ ).

FIGURE 3. Basic Positive Reference Operation (Note 4)

TL/H/5686-21

FIGURE 4. Recommended Full Scale Adjustment Circuit (Note 4)

$$I_{FS} \approx \frac{+V_{REF}}{R_{REF}} \times \frac{255}{256}$$

$$I_O + \bar{I}_O = I_{FS} \text{ for all logic states}$$

For fixed reference, TTL operation, typical values are:

$$V_{REF} = 10.000V$$

$$R_{REF} = 5.000k$$

$$R_{15} \approx R_{REF}$$

$$C_C = 0.01 \mu F$$

$$V_{LC} = 0V \text{ (Ground)}$$
