

# DBL 1032-D

## 20W BRIDGE AMPLIFIER

The DBL 1032-D is a class B dual audio power amplifier and easily designed for power booster amplifier that provides a high current capability(up to 3.5A) and that can drive very low impedance loads(down to  $1.6\Omega$  in stereo applications).

### FEATURES

- High output power :
  - $P_{OUT} = 10 + 10W$  at  $R_L = 2\Omega$ , THD = 10%, Dual
  - $P_{OUT} = 20W$  at  $R_L = 4\Omega$ , THD = 10%, BTL
- Very few external parts.
- Flexibility in use for Dual and BTL mode.
- No damage for polarity reverse insertion on the PCB.
- Built in several protection circuits.
  - Thermal protection.
  - Load dump protection.
  - Output DC and AC short protection.
  - Fortuitous open GND protection.

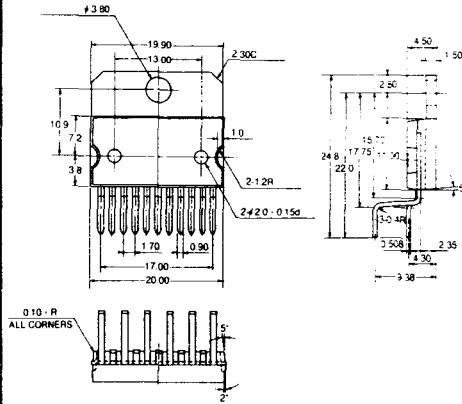

### APPLICATION

- Car radio and cassette.

### MAXIMUM RATINGS

Characteristic	Symbol	Rating	Unit
Peak Supply Voltage(for 50ms)	$V_{CC}$ (peak)	40	V
Supply Voltage	$V_{CC}$	28	V
Operating Supply Voltage	$V_{CC}$ (opr)	18	V
Output Peak Current	$I_{OUT}$ (peak)	4.5	A
Power Dissipation at $T_{case} = 60^\circ C$	$P_D$	30	W
Storage Temperature	$T_{stg}$	-40 ~ +150	°C

11 ZIP/HS Unit: mm

# DBL 1032-D

## ELECTRICAL CHARACTERISTICS

(Unless otherwise specified,  $f = 1\text{KHz}$ ,  $R_g = 600\ \Omega$ ,  $T_a = 25^\circ\text{C}$ )

### 1. BTL Mode.

Characteristic	Symbol	Test Condition		Min.	Typ.	Max.	Unit
Supply Voltage	$V_{CC}$	—		8	—	18	V
Output Offset Voltage	$V_{OS}$	$V_{CC} = 14.4\text{V}$		—	—	150	mV
		$V_{CC} = 13.2\text{V}$		—	—	150	mV

## APPLICATION INFORMATION

### 1. BTL Amplifier Design.

Voltage and current swings are twice for a BTL amplifier in comparison with one channel of dual amplifier. Care must be taken when selecting  $V_{CC}$  and  $R_L$  in order to avoid an output peak current maximum rating.

The following considerations can be useful when designing a bridge amplifier.

Parameter(before clipping)	Symbol	One Channel of Dual	BTL
Peak Output Voltage	$V_{OUT}$ (Max.)	$\frac{1}{2}(V_{CC} - 2V_{CE(SAT)})$	$V_{CC} - 2V_{CE(SAT)}$
Peak Output Current	$I_{OUT}$ (Max.)	$\frac{1}{2} \frac{V_{CC} - 2V_{CE(SAT)}}{R_L}$	$\frac{1}{2} \frac{V_{CC} - 2V_{CE(SAT)}}{R_L}$
Output Power(rms)	$P_{OUT}$ (Max.)	$\frac{1}{4} \frac{(V_{CC} - 2V_{CE(SAT)})^2}{2R_L}$	$\frac{(V_{CC} - 2V_{CE(SAT)})^2}{2R_L}$

The closed loop voltage gain of BTL configuration is given by (See Fig.3)

$$G_V = \frac{V_{OUT}}{V_{IN}} = 1 + \frac{R_1}{R_2 + R_4} + \frac{R_3}{R_4}$$

$G_V(dB)$	$R_1(\Omega)$	$R_2=R_4(\Omega)$	$R_3(\Omega)$
40	1000	39	2000
50	1000	12	2000

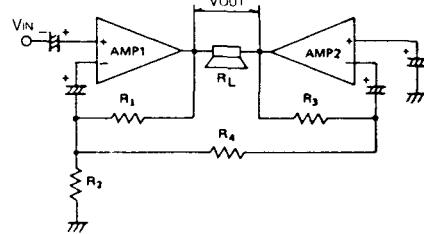

Fig. 3.

### 2. Built-in Protection Circuits

#### 1) Load dump protection.

The DBL1032-D can withstand a voltage pulse train, on pin 9, of the type shown in Fig 4. If the supply voltage peaks to more than 40V, then an IC filter must be inserted between the supply and pin 9 in order to assure that the pulses at pin 9 will be held within the limits shown. A suggested LC network is shown in fig 5. With this network, a train of pulses with amplitude up to 120V and width of 2ms can be applied at point A. The maximum operating supply voltage is 18V because this type of protection is ON when the supply voltage(pulse or DC)exceeds 18V.

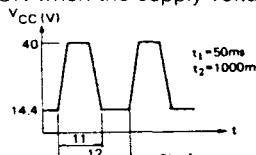

Fig. 4.

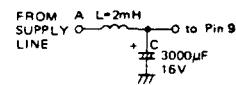

Fig. 5.

#### 2) Short circuit protection.

The DBL1032-D can withstand a permanent short-circuit on the output for a supply voltage up to 16V.

#### 3) Reverse insertion protection.

The device can handle high current (up to 10A) with no damage for a longer period than the blow-out time of quick 2A fuse(nomally connected in series with the supply.)

#### 4) Open ground protection.

The DBL1032-D protection diodes avoid any damage when the device is in the ON condition and ground is accidentally opened.

#### 5) DC Voltage Protection.

The DBL1032-D can withstand a DC Voltage up to 28V with damage.

#### 6) Thermal Protection.

The DBL1032-D can withstand an excessive ambient temperature of an overload on the output.

#### 7) Loud speaker protection.

The circuit offers loud speaker protection during short circuit for one wire to ground.

## APPLICATION INFORMATION(continued)

### 3. External Parts Suggestion

The recommended values of the components are those shown on BTL application circuit.

Component	Recommended Value	Purpose	Larger Value	Smaller Value
R <sub>1</sub>	120KΩ	Maximum P <sub>OUT</sub>	Smaller P <sub>OUT</sub> (Max.)	Smaller P <sub>OUT</sub> (Max.)
R <sub>2</sub>	1KΩ	Closed loop gain setting	—	—
R <sub>3</sub>	2KΩ			
R <sub>4</sub> and R <sub>5</sub>	12Ω	Frequency stability	Danger of oscillation at high frequency with inductive load	—
R <sub>6</sub> and R <sub>7</sub>	1Ω			
C <sub>1</sub>	2.2μF	Input DC decoupling	High turn on delay	Higher turn on pop, Higher low frequency cutoff, Increase of noise
C <sub>2</sub>	2.2μF	Cancelling turn on pop and optimizing turn on delay		
C <sub>3</sub>	0.1μF	Supply bypass	—	Danger of oscillation.
C <sub>4</sub>	10μF	Ripple Rejection	Increase of R.R and switch on time	Degradation of R.R
C <sub>5</sub> and C <sub>7</sub>	100μF	Bootstrapping	—	Increase of THD at low frequency
C <sub>6</sub> and C <sub>8</sub>	220μF	Feedback input DC decoupling, low frequency cutoff.	—	Higher low frequency cutoff
C <sub>9</sub> and C <sub>10</sub>	0.1μF	Frequency stability	—	Danger of oscillation
