

54LS298/DM74LS298 Quad 2-Port Register Multiplexer with Storage

General Description

The 'LS298 is a quad 2-port register. It is the logical equivalent of a quad 2-input multiplexer followed by a quad 4-bit edge-triggered register. A Common Select input selects between two 4-bit input ports (data sources). The selected data is transferred to the output register synchronous with the HIGH-to-LOW transition of the Clock input.

Features

- Select from two data sources
- Fully edge-triggered operation
- Typical power dissipation of 65 mW

I0a, I0d	Source 0 Data Inputs
I1a, I1d	Source 1 Data Inputs
Qa, Qd	Flip-Flop Outputs

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	10V
Operating Free Air Temperature Range	
54LS	–55°C to +125°C
DM74LS	0°C to +70°C
Storage Temperature Range	–65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Functional Description

This device is a high speed quad 2-port register. It selects four bits of data from two sources (ports) under the control of a Common Select input (S). The selected data is transferred to the 4-bit output register synchronous with the HIGH-to-LOW transition of the Clock input ($\overline{CP}$). The 4-bit output register is fully edge-triggered. The Data inputs (I_{nx}) and Select input (S) need be stable only one setup time prior to the HIGH-to-LOW transition of the clock for predictable operation.

Truth Table

Inputs			Output
S	$I0_x$	$I1_x$	Q_x
l	l	X	L
l	h	X	H
h	X	l	L
h	X	h	H

l = LOW Voltage Level one setup time prior to the HIGH-to-LOW clock transition.

h = HIGH Voltage Level one setup time prior to the HIGH-to-LOW clock transition.

H = HIGH Voltage Level

L = LOW Voltage Level

X = Immaterial
