

DIRECTPATH™ STEREO LINE DRIVER, ADJUSTABLE GAIN

Check for Samples: [DRV601](#)

FEATURES

- External Gain Setting Resistors
- Space Saving Package
 - 20-Pin, 4 mm × 4 mm Thin QFN, Thermally Optimized PowerPAD™ Package
- Ground-Referenced Outputs Eliminate DC-Blocking Capacitor
 - Reduce Board Area
 - Reduce Component Cost
 - Improve THD+N Performance
 - No Degradation of Low-Frequency Response Due to Output Capacitors
- Wide Power Supply Range: 1.8 V to 4.5 V
- 2 Vrms/Ch Output Voltage into 600 Ω at 3.3 V supply

- Independent Right and Left Channel Shutdown Control
- Short-Circuit and Thermal Protection
- Pop Reduction Circuitry

APPLICATIONS

- Set-Top Boxes
- CD / DVD Players
- DVD-Receivers
- HTIB
- PDP / LCD TV's

DESCRIPTION

The DRV601 is a stereo line driver designed to allow the removal of the output dc-blocking capacitors for reduced component count and cost. The device is ideal for single supply electronics where size and cost are critical design parameters.

The DRV601 is capable of driving 2 Vrms into a 600-Ω load at 3.3 V. The device has external gain setting resistors, that support a gain range of -1V/V to -10V/V, and line outputs that has ±8-kV IEC ESD protection. The device has independent shutdown control for the right and left audio channels.

The DRV601 is available in a 4 mm × 4 mm Thin QFN package.

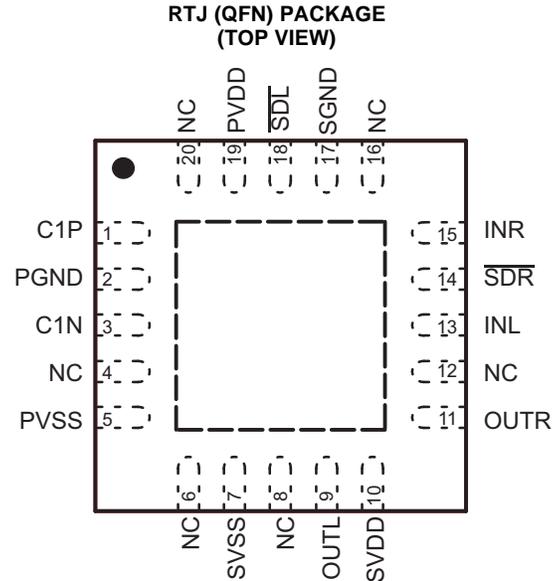

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

DIRECTPATH, PowerPAD, DirectPath are trademarks of Texas Instruments.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

NC - No internal connection

TERMINAL FUNCTIONS

TERMINAL		I/O	DESCRIPTION
NAME	QFN		
C1P	1	I/O	Charge pump flying capacitor positive terminal
PGND	2	I	Power ground, connect to ground.
C1N	3	I/O	Charge pump flying capacitor negative terminal
NC	4, 6, 8, 12, 16, 20		No connection
PVSS	5	O	Output from charge pump.
SVSS	7	I	Amplifier negative supply, connect to PVSS via star connection.
OUTL	9	O	Left audio channel output signal
SVDD	10	I	Amplifier positive supply, connect to PVDD via star connection.
OUTR	11	O	Right audio channel output signal
INL	13	I	Left audio channel input signal
$\overline{\text{SDR}}$	14	I	Right channel shutdown, active low logic.
INR	15	I	Right audio channel input signal
SGND	17	I	Signal ground, connect to ground.
$\overline{\text{SDL}}$	18	I	Left channel shutdown, active low logic.
PVDD	19	I	Supply voltage, connect to positive supply.
Exposed Pad			Exposed pad must be soldered to a floating plane. Do NOT connect to power or ground.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

over operating free-air temperature range, $T_A = 25^\circ\text{C}$ (unless otherwise noted)

		VALUE / UNIT
	Supply voltage, AVDD, PVDD	-0.3 V to 5.5 V
V_I	Input voltage	$V_{SS} - 0.3 \text{ V}$ to $V_{DD} + 0.3 \text{ V}$
$R_{(\text{Load})}$	Minimum load impedance	$\geq 100 \Omega$
T_A	Operating free-air temperature range	-40°C to 85°C
T_J	Operating junction temperature range	0°C to 150°C
T_{stg}	Storage temperature range	-65°C to 85°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

AVAILABLE OPTIONS

T_A	PACKAGED DEVICES ⁽¹⁾	PART NUMBER	SYMBOL
-40°C to 85°C	20-pin, 4 mm x 4 mm QFN	DRV601RTJ ⁽²⁾	AKQ

- (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.
- (2) The RTJ package is only available taped and reeled. To order, add the suffix "R" to the end of the part number for a reel of 3000, or add the suffix "T" to the end of the part number for a reel of 250 (e.g., DRV601RTJR).

RECOMMENDED OPERATING CONDITIONS

		MIN	MAX	UNIT
V_{SS}	Supply voltage, AVDD, PVDD	1.8	4.5 ⁽¹⁾	V
V_{IH}	High-level input voltage	$\overline{\text{SDL}}, \overline{\text{SDR}}$	1.5	V
V_{IL}	Low-level input voltage	$\overline{\text{SDL}}, \overline{\text{SDR}}$	0.5	V
T_A	Operating free-air temperature	-40	85	$^\circ\text{C}$

- (1) Device can shut down for $V_{DD} > 4.5 \text{ V}$ to prevent damage to the device.

ELECTRICAL CHARACTERISTICS

$T_A = 25^\circ\text{C}$ (unless otherwise noted)

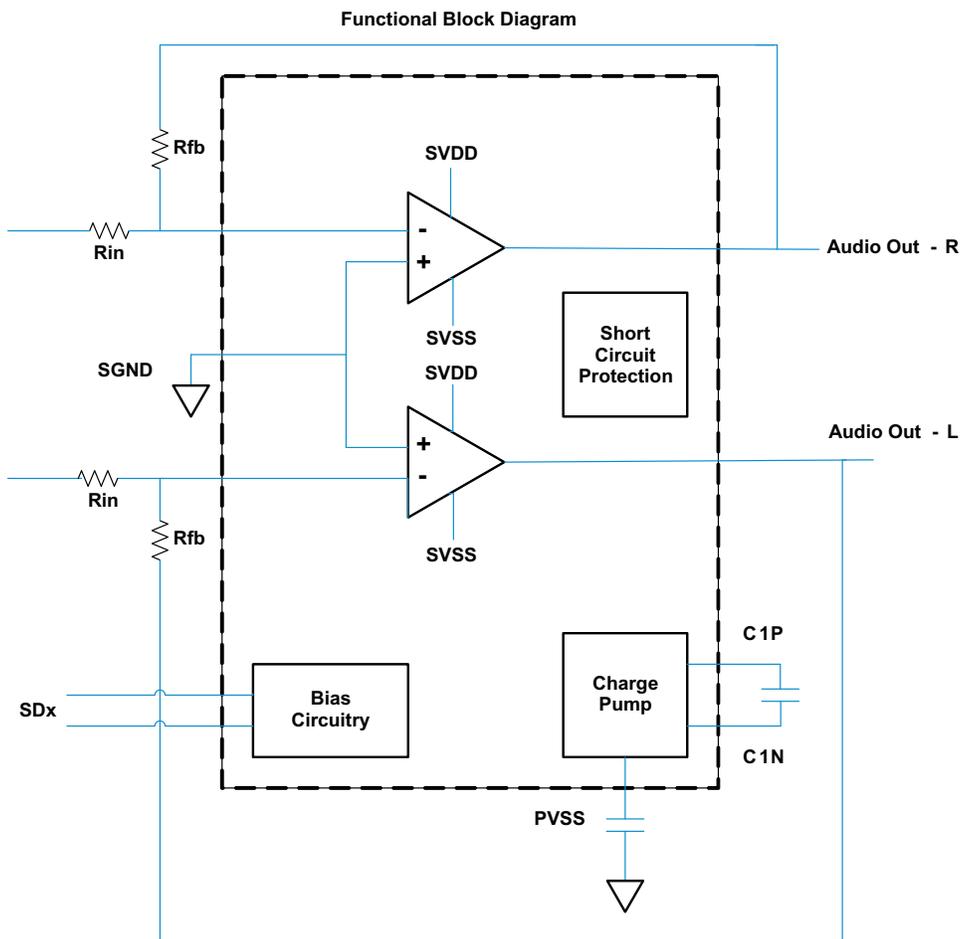

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$ V_{OS} $	Output offset voltage			8	mV
PSRR	Power Supply Rejection Ratio		88		dB
V_{OH}	High-level output voltage	3.10			V
V_{OL}	Low-level output voltage			-3.05	V
$ I_{IH} $	High-level input current ($\overline{\text{SDL}}, \overline{\text{SDR}}$)			1	μA
$ I_{IL} $	Low-level input current ($\overline{\text{SDL}}, \overline{\text{SDR}}$)			1	μA
I_{DD}	Supply Current	$V_{DD} = 1.8 \text{ V}$, No load, $\overline{\text{SDL}} = \overline{\text{SDR}} = V_{DD}$	5.3		mA
		$V_{DD} = 3.3 \text{ V}$, No load, $\overline{\text{SDL}} = \overline{\text{SDR}} = V_{DD}$	7.1		
		$V_{DD} = 4.5 \text{ V}$, No load, $\overline{\text{SDL}} = \overline{\text{SDR}} = V_{DD}$	8.7		
		Shutdown mode, $V_{DD} = 1.8 \text{ V}$ to 4.5 V		1	μA

OPERATING CHARACTERISTICS

$V_{DD} = 3.3\text{ V}$, $T_A = 25^\circ\text{C}$, $R_L = 600\ \Omega$, $C_{(PUMP)} = C_{(PVSS)} = 1\ \mu\text{F}$, $C_{IN} = 1\ \mu\text{F}$, $R_{in} = 10\ \text{k}\Omega$, $R_{fb} = 20\ \text{k}\Omega$ (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_O	Output Voltage(Outputs In Phase)	THD = 1%, $V_{DD} = 3.3\text{ V}$, $f = 1\ \text{kHz}$		2.1		V_{RMS}
		THD = 1%, $V_{DD} = 4.5\text{ V}$, $f = 1\ \text{kHz}$		2.7		
		THD = 1%, $V_{DD} = 4.5\text{ V}$, $f = 1\ \text{kHz}$, $R_L = 100\ \text{k}\Omega$		2.8

APPLICATION INFORMATION

Line Driver Amplifiers

Single-supply Line Driver amplifiers typically require dc-blocking capacitors. The top drawing in [Figure 13](#) illustrates the conventional Line Driver amplifier connection to the load and output signal.

DC blocking capacitors are often large in value. The line load (typical resistive values of 600 Ω to 10 k Ω) combine with the dc blocking capacitors to form a high-pass filter. [Equation 1](#) shows the relationship between the load impedance (R_L), the capacitor (C_O), and the cutoff frequency (f_c).

$$f_c = \frac{1}{2\pi R_L C_O} \quad (1)$$

C_O can be determined using [Equation 2](#), where the load impedance and the cutoff frequency are known.

$$C_O = \frac{1}{2\pi R_L f_c} \quad (2)$$

If f_c is low, the capacitor must then have a large value because the load resistance is small. Large capacitance values require large package sizes. Large package sizes consume PCB area, stand high above the PCB, increase cost of assembly, and can reduce the fidelity of the audio output signal.

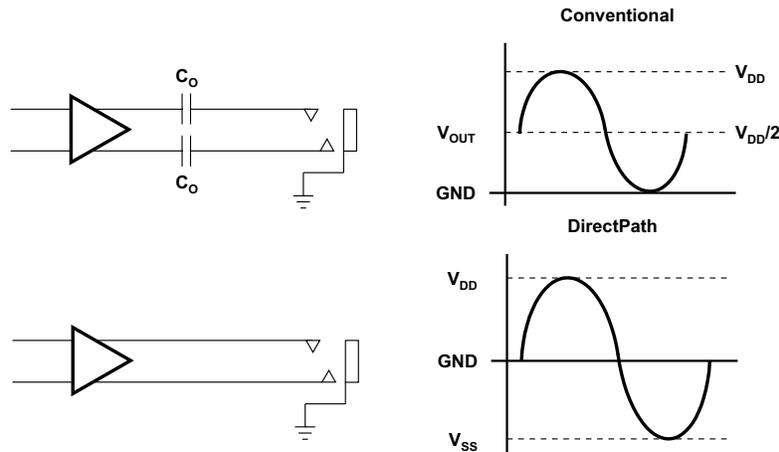

Figure 13. Amplifier Applications

The DirectPath™ amplifier architecture operates from a single supply but makes use of an internal charge pump to provide a negative voltage rail. Combining the user provided positive rail and the negative rail generated by the IC, the device operates in what is effectively a split supply mode. The output voltages are now centered at zero volts with the capability to swing to the positive rail or negative rail. The DirectPath™ amplifier requires no output dc blocking capacitors. The bottom block diagram and waveform of [Figure 13](#) illustrate the ground-referenced Line Driver architecture. This is the architecture of the DRV601.

Charge Pump Flying Capacitor and PVSS Capacitor

The charge pump flying capacitor serves to transfer charge during the generation of the negative supply voltage. The PVSS capacitor must be at least equal to the charge pump capacitor in order to allow maximum charge transfer. Low ESR capacitors are an ideal selection, and a value of 1µF is typical. Capacitor values that are smaller than 1µF can be used, but the maximum output voltage may be reduced and the device may not operate to specifications.

Decoupling Capacitors

The DRV601 is a DirectPath™ Line Driver amplifier that require adequate power supply decoupling to ensure that the noise and total harmonic distortion (THD) are low. A good low equivalent-series-resistance (ESR) ceramic capacitor, typically 2.2µF, placed as close as possible to the device V_{DD} lead works best. Placing this decoupling capacitor close to the DRV601 is important for the performance of the amplifier. For filtering lower frequency noise signals, a 10-µF or greater capacitor placed near the audio power amplifier would also help, but it is not required in most applications because of the high PSRR of this device.

Gain setting resistors ranges

The gain setting resistors, R_{in} and R_{fb} , must be chosen so that noise, stability and input capacitor size of the DRV601 is kept within acceptable limits. Voltage gain is defined as R_{fb} divided by R_{in} .

Selecting values that are too low demands a large input ac-coupling capacitor, C_{IN} . Selecting values that are too high increases the noise of the amplifier. [Table 1](#) lists the recommended resistor values for different gain settings.

Table 1. Recommended Resistor Values

Gain	Input Resistor Value, R_{in}	Feedback Resistor Value, R_{fb}
-1 V/V	10 kΩ	10 kΩ
-1.5 V/V	10 kΩ	15 kΩ
-2 V/V	10 kΩ	20 kΩ
-10 V/V	4,7 kΩ	47 kΩ

Input-Blocking Capacitors

DC input-blocking capacitors are required to be added in series with the audio signal into the input pins of the DRV601. These capacitors block the DC portion of the audio source and allow the DRV601 inputs to be properly biased to provide maximum performance.

These capacitors form a high-pass filter with the input resistor, R_{in} . The cutoff frequency is calculated using [Equation 3](#). For this calculation, the capacitance used is the input-blocking capacitor and the resistance is the input resistor chosen from the gain table above, then the frequency and/or capacitance can be determined when one of the two values are given.

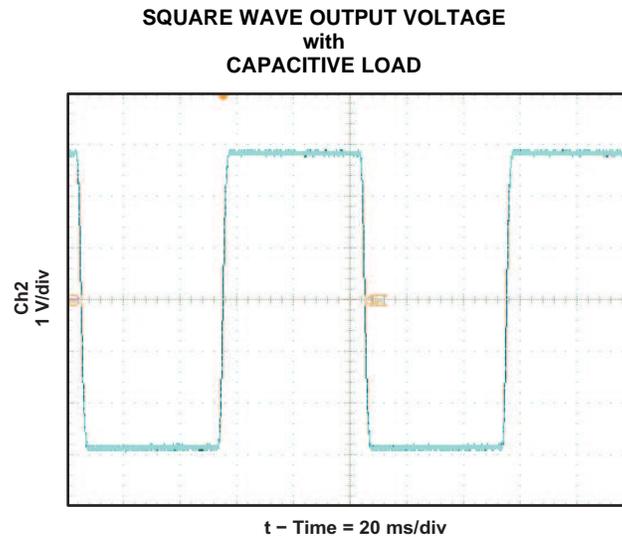

$$f_{C_{IN}} = \frac{1}{2\pi R_{IN} C_{IN}} \quad \text{or} \quad C_{IN} = \frac{1}{2\pi f_{C_{IN}} R_{IN}} \quad (3)$$

Supply Voltage Limiting At 4.5 V

The DRV601 have a built-in charge pump which serves to generate a negative rail for the line driver. Because the line driver operates from a positive voltage and negative voltage supply, circuitry has been implemented to protect the devices in the amplifier from an overvoltage condition. Once the supply is above 4.5 V, the DRV601 can shut down in an overvoltage protection mode to prevent damage to the device. The DRV601 resume normal operation once the supply is reduced to 4.5 V or lower.

Capacitive load

The DRV601 has the ability to drive a high capacitive load up to 330pF directly, higher capacitive loads can be accepted by adding a series resistor of 10Ω or larger. The figure below shows a 10kHz signal into a 470pF capacitor using the 10R series resistor.

**Figure 14.**

Layout Recommendations

A proposed layout for the DRV601 can be seen in the DRV601EVM user's guide, [SLOU215](#), and the Gerber files can be downloaded on www.ti.com, open the DRV601 product folder and look in the Tools & Software folder.

Exposed Pad On DRV601RTJ Package

The exposed metal pad on the DRV601RTJ package must be soldered down to a pad on the PCB in order to maintain reliability. *The pad on the PCB should be allowed to float and not be connected to ground or power.* Connecting this pad to power or ground prevents the device from working properly because it is connected internally to PVSS.

SGND and PGND Connections

The SGND and PGND pins of the DRV601 must be routed back to the decoupling capacitor separately in order to provide proper device operation. If the SGND and PGND pins are connected directly to each other, the part functions without risk of failure, but the noise and THD performance do not meet the specifications.

Gain setting resistors

The gain setting resistors, R_{in} and R_{fb} , must be placed close to pin 13 respectively pin 17 to minimize the capacitive loading on these input pins and to ensure maximum stability of the DRV601. For the recommended PCB layout, see the DRV601EVM user guide.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Only one of markings shown within the brackets will appear on the physical device.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
