

DS1603/DS3603 TRI-STATE® Dual Receivers

General Description

The DS1603/DS3603 are dual differential TRI-STATE line receivers designed for a broad range of system applications. They feature a high input impedance and low input current which reduces the loading effects on a digital transmission line, making them ideal for use in party line systems and general purpose applications like transducer preamplifiers, level translators and comparators.

The receivers feature a ± 25 mV input sensitivity specified over a ± 3 V common mode range. Input protection diodes are incorporated in series with the collectors of the differential stage. These diodes are useful in applications that have multiple V_{CC+} supplies or V_{CC+} supplies that are turned off thus avoiding signal clamping. In addition, TTL compatible strobe and control lines are provide for flexibility in the application.

The DS1603/DS3603 are pin compatible with the DS75107, DS75108 and DS75208 series of dual line receivers.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the -55°C to +125°C temperature range for the DS1603 and across the 0°C to +70°C range for the DS3603. All typical values are for $T_A = 25^\circ C$ and $V_{CC} = 5V$.

Note 3: All current into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

Note 4: Only one output at a time should be shorted.

Switching Characteristics $V_{CC}^+ = 5V, V_{CC}^- = -5V, T_A = 25^\circ C$
