

DS26LS32C/DS26LS32M/DS26LS32AC/DS26LS33C/ DS26LS33M/DS26LS33AC Quad Differential Line Receivers

General Description

The DS26LS32 and DS26LS32A are quad differential line receivers designed to meet the RS-422, RS-423 and Federal Standards 1020 and 1030 for balanced and unbalanced digital data transmission.

The DS26LS32 and DS26LS32A have an input sensitivity of 200 mV over the input voltage range of $\pm 7\text{V}$ and the DS26LS33 and DS26LS33A have an input sensitivity of 500 mV over the input voltage range of $\pm 15\text{V}$.

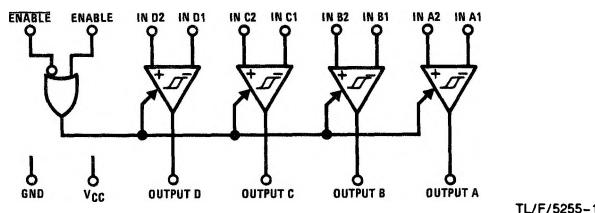

Both the DS26LS32A and DS26LS33A differ in function from the popular DS26LS32 and DS26LS33 in that input pull-up and pull-down resistors are included which prevent output oscillation on unused channels.

Each version provides an enable and disable function common to all four receivers and features TRI-STATE® outputs with 8 mA sink capability. Constructed using low power Schottky processing, these devices are available over the full military and commercial operating temperature ranges.

Features

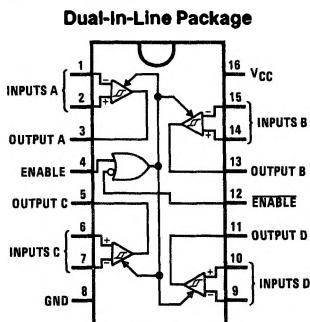

- High differential or common-mode input voltage ranges of $\pm 7\text{V}$ on the DS26LS32 and DS26LS32A and $\pm 15\text{V}$ on the DS26LS33 and DS26LS33A
- $\pm 0.2\text{V}$ sensitivity over the input voltage range on the DS26LS32 and DS26LS32A, $\pm 0.5\text{V}$ sensitivity on the DS26LS33 and DS26LS33A
- DS26LS32 and DS26LS32A meet all requirements of RS-422 and RS-423
- 6k minimum input impedance
- 100 mV input hysteresis on the DS26LS32 and DS26LS32A, 200 mV on the DS26LS33 and DS26LS33A
- Operation from a single 5V supply
- TRI-STATE outputs, with choice of complementary output enables for receiving directly onto a data bus

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: All currents into device pins are shown as positive, all currents out of device pins are shown as negative, all voltages are referenced to ground, unless otherwise specified. All values shown as max or min are so classified on absolute value basis.

Note 3: All typical values are V_{CC} = 5V, T_A = 25°C.

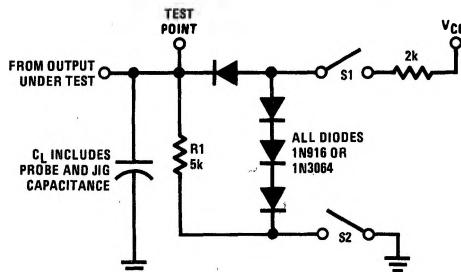

Note 4: Only one output at a time should be shorted.

Switching Characteristics $V_{CC} = 5V, T_A = 25^\circ C$
