

DS36276 FAILSAFE Multipoint Transceiver

General Description

The DS36276 FAILSAFE Multipoint Transceiver is designed for use on bi-directional differential busses. It is compatible with existing TIA/EIA-485 transceivers, however, it offers an additional feature not supported by standard transceivers.

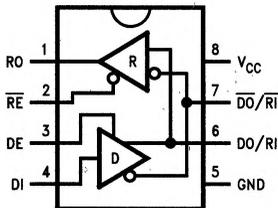

The FAILSAFE feature guarantees the receiver output to a known state when the Interface is in the following conditions: Floating Line, Idle Line (no active drivers), and Line Fault conditions (open or short). The receiver output is in a HIGH state for the following conditions: OPEN Inputs, Terminated Inputs (50Ω), and SHORTED Inputs.

FAILSAFE is a highly desirable feature when the transceivers are used with Asynchronous Controllers such as UARTs.

Features

- FAILSAFE receiver, RO = HIGH for:
 - OPEN inputs
 - Terminated inputs
 - SHORTED inputs
- Compatible with popular interface standards:
 - TIA/EIA-485 (RS-485)
 - TIA/EIA-422-A (RS-422-A)
 - CCITT Recommendation V.11
- Bi-Directional Transceiver
 - Designed for multipoint transmission
- Separate driver input, driver enable, receiver enable, and receiver output for maximum flexibility
- Wide bus common mode range
 - (-7V to +12V)
- Pin compatible with: DS75176B, DS96176, DS3695 and SN75176A and B
- Available in plastic DIP and SOIC packages

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The tables of "Electrical Characteristics" specify conditions for device operation.

Note 2: Current into device pins is defined as positive. Current out of device pins is defined as negative. All voltages are referenced to ground unless otherwise specified.

Note 3: $\Delta |V_{TI}|$ and $\Delta |V_{OS}|$ are changes in magnitude of V_{TI} and V_{OS} , respectively, that occur when the input changes state.

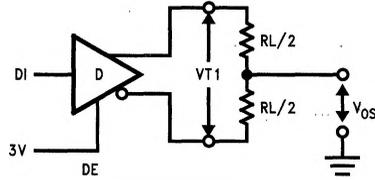

Note 4: All typicals are given for $V_{CC} = 5.0\text{V}$ and $T_A = +25^\circ\text{C}$.

Note 5: Threshold parameter limits specified as an algebraic value rather than by magnitude.

Note 6: Hysteresis defined as $V_{HST} = V_{TH} - V_{TL}$.

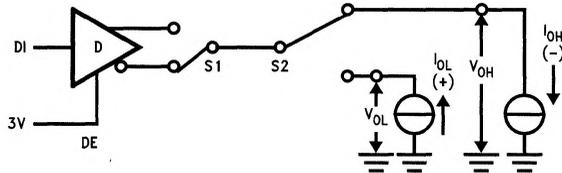

Note 7: I_{IN} includes the receiver input current and driver TRI-STATE leakage current.
