

## DS96173/DS96175 RS-485/RS-422 Quad Differential Line Receivers

### General Description

The DS96173 and DS96175 are high speed quad differential line receivers designed to meet EIA Standard RS-485. The devices have TRI-STATE® outputs and are optimized for balanced multipoint data bus transmission at rates up to 10 Mbps. The receivers feature high input impedance, input hysteresis for increased noise immunity, and input sensitivity of 200 mV over a common mode input voltage range of -7V to +12V. The receivers are therefore suitable for multipoint applications in noisy environments. The DS96173 features an active high and active low Enable, common to all four receivers. The DS96175 features separate active high Enables for each receiver pair. Compatible RS-485 drivers, transceivers, and repeaters are also offered to provide optimum bus performance. The respective device types are DS96172, DS96174, DS96176 and DS96177.

### Features

- Meets EIA Standard RS-485, RS-422A, RS-423A
- Designed for multipoint bus applications
- TRI-STATE Outputs
- Common mode input voltage range: -7V to +12V
- Operates from single +5V supply
- Input sensitivity of  $\pm 200$  mV over common mode range
- Input hysteresis of 50 mV typical
- High input impedance
- DS96173/DS96175 are lead and function compatible with SN75173/75175 or the AM26LS32/MC3486 respectively

**Note 1:** "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The tables of "Electrical Characteristics" provide conditions for actual device operation.

**Note 2:** Unless otherwise specified Min/Max limits apply across the 0°C to +70°C range for the DS96173/DS96175. All typicals are given for  $V_{CC} = 5V$  and  $T_A = 25°C$ .

**Note 3:** All currents into the device pins are positive; all currents out of the device pins are negative. All voltages are reference to ground unless otherwise specified.

**Note 4:** The algebraic convention, when the less positive (more negative) limit is designated minimum, is used in this data sheet for common mode input voltage and threshold voltage levels only.

**Note 5:** Hysteresis is the difference between the positive-going input threshold voltage,  $V_{T+}$ , and the negative going input threshold voltage,  $V_{T-}$ .

**Note 6:** Refer to EIA Standards RS-485 for exact conditions.

**Note 7:** Only one output at a time should be shorted.

**Note 1:** The input pulse is supplied by a generator having the following characteristics: PRR = 1.0 MHz, 50% duty cycle,  $t_r \leq 6.0$  ns,  $t_f \leq 6.0$  ns,  $Z_O = 50\Omega$ .

**Note 2:**  $C_L$  includes probe and stray capacitance.

**Note 3:** DS96173 with active high and active low Enables is shown here. DS96175 has active high Enable only.

**Note 4:** All diodes are 1N916 or equivalent.

**Note 5:** To test the active low Enable E of DS96173, ground E and apply an inverted input waveform to  $\bar{E}$ . DS96175 has active high Enable only.

## Typical Application
