

# LM4121 Precision Micropower Low Dropout Voltage Reference

Check for Samples: LM4121

# **FEATURES (LM4121-1.2)**

- Small SOT23-5 Package
- Low Voltage Operation
- High Output Voltage Accuracy: 0.2%
- Source and Sink Current Output: ±5 mA
- Supply current: 160 μA Typ.
- Low Temperature Coefficient: 50 ppm/°C
- Enable Pin
- Output Voltages: 1.25V and Adjustable
- Industrial Temperature Range: -40°C to +85°C
- (For Extended Temperature Range, -40°C to 125°C, Contact Texas Instruments)

#### **APPLICATIONS**

- · Portable, Battery Powered Equipment
- Instrumentation and Process Control
- Automotive & Industrial
- Test Equipment
- Data Acquisition Systems
- Precision Regulators
- Battery Chargers
- Base Stations
- Communications
- Medical Equipment

### DESCRIPTION

The LM4121 is a precision bandgap voltage reference available in a fixed 1.25V and adjustable version with up to 5 mA current source and sink capability.

This series reference operates with input voltages as low as 1.8V and up to 12V consuming 160  $\mu$ A (Typ.) supply current. In power down mode, device current drops to less than 2  $\mu$ A.

The LM4121 comes in two grades A and Standard. The best grade devices (A) have an initial accuracy of 0.2%, while the standard have an initial accuracy of 0.5%, both with a tempco of 50ppm/°C guaranteed from -40°C to +125°C.

The very low operating voltage, low supply current and power-down capability of the LM4121 makes this product an ideal choice for battery powered and portable applications.

The device performance is guaranteed over the industrial temperature range (-40°C to +85°C), while certain specs are guaranteed over the extended temperature range (-40°C to +125°C). Please contact Texas Instruments for full specifications over the extended temperature range. The LM4121 is available in a standard 5-pin SOT-23 package.

# Table 1. SOT-23 Package Marking Information<sup>(1)</sup>

Field Information
rst Field:
R = Reference
econd and third Field:
9 = 1.250V Voltage Option
) = Adjustable
ourth Field:
A-B = Initial Reference Voltage Tolerance
$A = \pm 0.2\%$
$B = \pm 0.5\%$

(1) Only four fields of marking are possible on the SOT-23's small surface. This table gives the meaning of the four fields.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

# Absolute Maximum Ratings (1)(2)

Aboolate maximum ratings	
Maximum Voltage on input or enable pins	-0.3V to 14V
Output Short-Circuit Duration	Indefinite
Power Dissipation (T <sub>A</sub> = 25°C) <sup>(3)</sup> :	
DBV0005B package - θ <sub>JA</sub>	280°C/W
Power Dissipation	350 mW
ESD Susceptibility <sup>(4)</sup> Human Body Model Machine Model	2 kV 200V
Lead Temperature:	
Soldering, (10 sec.)	+260°C
Vapor Phase (60 sec.)	+215°C
Infrared (15 sec.)	+220°C

- (1) "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see Electrical Characteristics LM4121-1.250V and Electrical Characteristics LM4121-ADJ tables. The guaranteed specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
- (3) Without PCB copper enhancements. The maximum power dissipation must be de-rated at elevated temperatures and is limited by T<sub>JMAX</sub> (maximum junction temperature), θ<sub>J-A</sub> (junction to ambient thermal resistance) and T<sub>A</sub> (ambient temperature). The maximum power dissipation at any temperature is: PDiss<sub>MAX</sub> = (T<sub>JMAX</sub> ¬ T<sub>A</sub>)/θ<sub>J-A</sub> up to the value listed in the Absolute Maximum Ratings.
- (4) The human body model is a 100 pF capacitor discharged through a 1.5 kΩ resistor into each pin. The machine model is a 200 pF capacitor discharged directly into each pin.

#### **PIN DESCRIPTIONS**

Output (Pin 5)	Reference Output.
Input (Pin 4)	Positive Supply.
Ground (Pin 2)	Negative Supply or Ground Connection
Enable (Pin 3)	Pulled to input for normal operation. Forcing this pin to ground will turn-off the output.
REF (Pin 1)	REF Pin (1.25V option only). This pin should be left unconnected for 1.25V option.
Adj (Pin 1)	V <sub>OUT</sub> Adj Pin (Adjustable option only). See Application Hints section.

#### **APPLICATION HINTS**

The standard application circuit for the LM4121 is shown in Figure 34. The output voltage is set with the two feedback resistors, according to the following formula:

$$V_{OUT} = [V_{ref}(1 + R1/R2) - I_{bias} \cdot R1]$$
 (1)

Values for R1 and R2 should be chosen to be less than 1 M $\Omega$ .  $I_{bias}$  typically flows out of the adjust pin. Values for  $V_{ref}$  and  $I_{bias}$  are found in the Electrical Characteristics - LM4121-1.250V and Electrical Characteristics - LM4121-ADJ tables. For best accuracy, be sure to take into account the variation of  $V_{REF}$  with input voltage, load and output voltage.

The LM4121 is designed to be stable with ceramic output capacitors in the range of  $0.022\mu F$  to  $0.047\mu F$ . Note that  $0.022\mu F$  is the minimum required output capacitor. These capacitors typically have an ESR of about 0.1 to  $0.5\Omega$ . Smaller ESR can be tolerated, however larger ESR can not. The output capacitor can be increased to improve load transient response, up to about  $1\mu F$ . However, values above  $0.047\mu F$  must be tantalum. With tantalum capacitors, in the  $1\mu F$  range, a small capacitor between the output and the reference (Adj) pin is required. This capacitor will typically be in the 50pF range. Care must be taken when using output capacitors of  $1\mu F$  or larger. These application must be thoroughly tested over temperature, line and load. Also, when the LM4121 is used as a controller, with external active components, each application must be carefully tested to ensure a stable design. The adjust pin is sensitive to noise and capacitive loading. The trace to this pin must be as short as possible and the feedback resistors should be close to this pin. Also, a single point ground to the LM4121 will help ensure good accuracy at high load currents.

An input capacitor is typically not required. However, a 0.1µF ceramic can be used to help prevent line transients from entering the LM4121. Larger input capacitors should be tantalum or aluminium.

The enable pin is an analog input with very little hysteresis. About 6µA into this pin is required to turn the part on, and it must be taken close to GND to turn the part off (see Electrical Characteristics - LM4121-1.250V and Electrical Characteristics - LM4121-ADJ tables for thresholds). There is a *minimum* slew rate on this pin of about 0.003V/µS to prevent glitches on the output. All of these conditions can easily be met with ordinary CMOS or TTL logic. If the shutdown feature is not required, then this pin can safely be connected directly to the input supply. Floating this pin is not recommended.

#### PRINTED CIRCUIT BOARD LAYOUT CONSIDERATION

The mechanical stress due to PC board mounting can cause the output voltage to shift from its initial value. References in SOT packages are generally less prone to assembly stress than devices in Small Outline (SOIC) package.

To reduce the stress-related output voltage shifts, mount the reference on the low flex areas of the PC board such as near to the edge or the corner of the PC board.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free** (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

### PACKAGE OPTION ADDENDUM

9-Mar-2013

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Only one of markings shown within the brackets will appear on the physical device.

# DBV (R-PDSO-G5)

# PLASTIC SMALL-OUTLINE PACKAGE

NOTES:

- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - D. Falls within JEDEC MO-178 Variation AA.

# DBV (R-PDSO-G5)

# PLASTIC SMALL OUTLINE

NOTES:

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
- D. Publication IPC-7351 is recommended for alternate designs.
- E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

#### IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
