

LM320L, LM79LXXAC Series 3-Terminal Negative Regulators

General Description

The LM320L/LM79LXXAC series of 3-terminal negative voltage regulators features fixed output voltages of $-5V$, $-12V$, and $-15V$ with output current capabilities in excess of 100 mA . These devices were designed using the latest computer techniques for optimizing the packaged IC thermal/electrical performance. The LM79LXXAC series, even when combined with a minimum output compensation capacitor of $0.1\text{ }\mu\text{F}$, exhibits an excellent transient response, a maximum line regulation of $0.07\% \text{ } V_{\text{O}}/\text{V}$, and a maximum load regulation of $0.01\% \text{ } V_{\text{O}}/\text{mA}$.

The LM320L/LM79LXXAC series also includes, as self-protection circuitry: safe operating area circuitry for output transistor power dissipation limiting, a temperature independent short circuit current limit for peak output current limiting, and a thermal shutdown circuit to prevent excessive junction temperature. Although designed primarily as fixed voltage regulators, these devices may be combined with simple external circuitry for boosted and/or adjustable voltages and currents. The LM79LXXAC series is available in the 3-lead TO-92 package, and SO-8; 8 lead package. The LM320L series is available in the 3-lead TO-92 package.

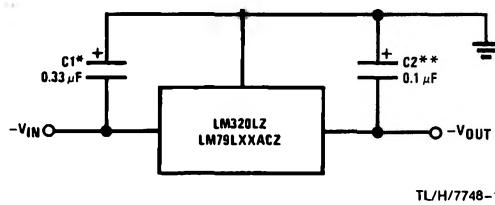

For output voltage other than $-5V$, $-12V$ and $-15V$ the LM137L series provides an output voltage range from 1.2V to 47V .

Features

- Preset output voltage error is less than $\pm 5\%$ overload, line and temperature
- Specified at an output current of 100 mA
- Easily compensated with a small $0.1\text{ }\mu\text{F}$ output capacitor
- Internal short-circuit, thermal and safe operating area protection
- Easily adjustable to higher output voltages
- Maximum line regulation less than $0.07\% \text{ } V_{\text{OUT}}/\text{V}$
- Maximum load regulation less than $0.01\% \text{ } V_{\text{OUT}}/\text{mA}$

Typical Applications

Fixed Output Regulator

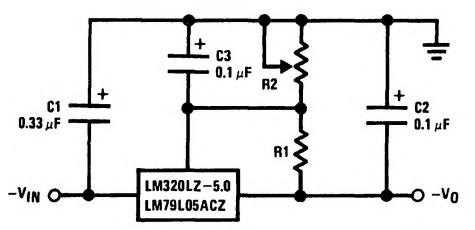

TL/H/7748-1

*Required if the regulator is located far from the power supply filter. A $1\text{ }\mu\text{F}$ aluminum electrolytic may be substituted.

**Required for stability. A $1\text{ }\mu\text{F}$ aluminum electrolytic may be substituted.

Adjustable Output Regulator

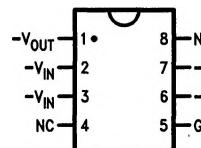

TL/H/7748-3

$$-V_0 = -5V - (5V/R_1 + I_Q) \cdot R_2, \\ 5V/R_1 > 3I_Q$$

Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Input Voltage

$V_O = -5V, -12V, -15V$ $-35V$

Internal Power Dissipation (Note 1)

Internally Limited

Operating Temperature Range

$0^\circ C$ to $+70^\circ C$

Maximum Junction Temperature

$+125^\circ C$

Storage Temperature Range

$-55^\circ C$ to $+150^\circ C$

Lead Temperature (Soldering, 10 sec.)

$260^\circ C$

Electrical Characteristics (Note 2) $T_A = 0^\circ C$ to $+70^\circ C$ unless otherwise noted.

Output Voltage			$-5V$			$-12V$			$-15V$			Units	
Input Voltage (unless otherwise noted)			$-10V$			$-17V$			$-20V$				
Symbol	Parameter	Conditions	Min	Typ	Max	Min	Typ	Max	Min	Typ	Max

	Input Voltage Required to Maintain Line Regulation	$T_j = 25^\circ C, I_O = 100 \text{ mA}$	-7.3			-14.6			-17.7			V	
		$I_O = 40 \text{ mA}$	-7.0			-14.5			-17.5			V	

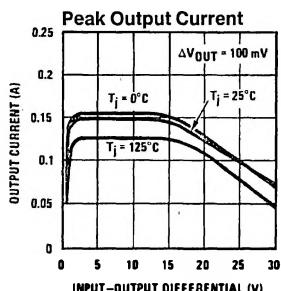

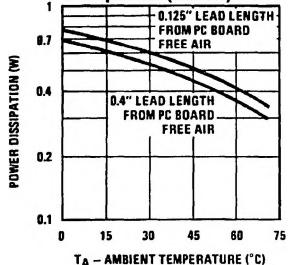

Note 1: Thermal resistance of Z package is $60^\circ C/W$ θ_{JC} , $232^\circ C/W$ θ_{JA} at still air, and $88^\circ C/W$ at 400 ft/min of air. The M package θ_{JA} is $180^\circ C/W$ in still air. The maximum junction temperature shall not exceed $125^\circ C$ on electrical parameters.

Note 2: To ensure constant junction temperature, low duty cycle pulse testing is used.
