

**M52742ASP****BUS CONTROLLED 3-CHANNEL VIDEO PREAMP FOR CRT DISPLAY MONITOR****DESCRIPTION**

M52742ASP is semiconductor integrated circuit for CRT display monitor.

It includes OSD blanking, OSD mixing, retrace blanking, wide band amplifier, brightness control, uniformity function.

Main/sub contrast and OSD adjust function can be controlled by I<sup>2</sup>C bus.

**FEATURES**

- Frequency band width: RGB.....200MHz (at -3dB)  
OSD.....80MHz
- Input :RGB.....0.7V<sub>P-P</sub> (typ.)  
OSD.....3V<sub>P-P</sub> minimum (positive)  
BLK (for OSD).....3V<sub>P-P</sub> minimum (positive)  
Retrace BLK.....3V<sub>P-P</sub> minimum (positive)
- Output :RGB.....5.5V<sub>P-P</sub> (max.)  
OSD.....5V<sub>P-P</sub> (max.)
- Main contrast and sub contrast can be controlled by I<sup>2</sup>C bus.
- Include internal and external pedestal clamp circuit

**STRUCTURE**

Bipolar silicon monolithic IC

**APPLICATION**

CRT display monitor

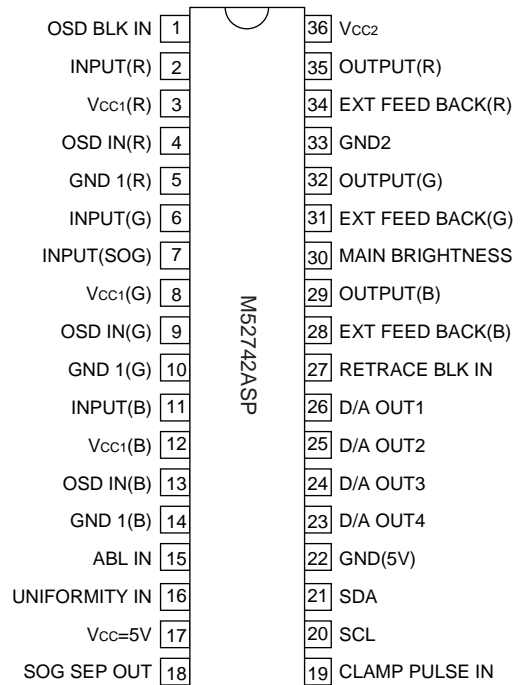

**RECOMMENDED OPERATING CONDITION**

Supply voltage range.....11.5 to 12.5V (V3, V8, V12, V36)  
4.5 to 5.5V (V17)

Rated supply voltage.....12.0V (V3, V8, V12, V36)  
5.0V (V17)

**MAJOR SPECIFICATION**

Bus controlled 3ch video pre-amp with OSD mixing function and retrace blanking function

**PIN CONFIGURATION (TOP VIEW)**

Outline 36P4E

# M52742ASP

## BUS CONTROLLED 3-CHANNEL VIDEO PREAMP FOR CRT DISPLAY MONITOR

### BLOCK DIAGRAM

**M52742ASP****BUS CONTROLLED 3-CHANNEL VIDEO PREAMP FOR CRT DISPLAY MONITOR****ABSOLUTE MAXIMUM RATINGS** (Ta=25°C)

Symbol	Parameter	Ratings	Unit
Vcc12	Supply voltage (pins 3,8,12,36)	13.0	V
Vcc5	Supply voltage (pin 17)	6.0	V
Pd	Power dissipation	2403	mW

**ELECTRICAL CHARACTERISTICS TEST METHOD****ICC1 Circuit current<sup>1</sup>**

Measuring conditions are as listed in supplementary Table.  
Measured with a current meter at test point 1A.

**ICC2 Circuit current<sup>2</sup>**

Measuring conditions are as listed in supplementary Table.  
Measured with a current meter at test point 1B.

**Vomax Output dynamic range**

Decrease V30 gradually, and measure the voltage when the waveform output is distorted. The voltage is called VOL.

Next, increase V30 gradually, and measure the voltage when the top of waveform output is distorted. The voltage is called VOH.

Voltage Vomax is calculated by the equation below:

$$Vomax = VOH - VOL$$

**Vimax Maximum input**

Increase the input signal (SG2) amplitude gradually, starting from 700mV<sub>p-p</sub>. Measure the amplitude of the input signal when the output signal starts becoming distorted.

**Gv Maximum gain**

Input SG1, and read the amplitude output at OUT (29, 32, 35). The amplitude is called VOUT (29, 32, 35). Maximum gain Gv is calculated by the equation below:

$$Gv = 20 \log \frac{VOUT}{0.7} \text{ (dB)}$$

**Gv Relative maximum gain**

Relative maximum gain Gv is calculated by the equation below:

$$Gv = VOUT(29)/VOUT(32), \\ VOUT(32)/VOUT(35), \\ VOUT(35)/VOUT(29)$$

**Vc1 Main contrast control characteristics<sup>1</sup>**

Measuring the amplitude output at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35). Main contrast control characteristics Vc1 is calculated by the equation below:

$$Vc1 = 20 \log \frac{VOUT}{0.7} \text{ (dB)}$$

**Vc1 Main contrast control relative characteristics<sup>1</sup>**

Relative characteristics Vc1 is calculated by the equation below:

$$Vc1 = VOUT(29)/VOUT(32), \\ VOUT(32)/VOUT(35), \\ VOUT(35)/VOUT(29)$$

**Vc2 Main contrast control characteristics<sup>2</sup>**

Measuring condition and procedure are the same as described in Vc1.

**Vc2 Main contrast control relative characteristics<sup>2</sup>**

Measuring condition and procedure are the same as described in Vc1.

**M52742ASP****BUS CONTROLLED 3-CHANNEL VIDEO PREAMP FOR CRT DISPLAY MONITOR****Vc3 Main contrast control characteristics3**

Measuring the amplitude output at OUT (29, 32, 35).

The measured value is called VOUT (29, 32, 35).

**Vc3 Main contrast control relative characteristics3**

Measuring condition and procedure are the same as described in Vc1.

**Vsc1 Sub contrast control characteristics1**

Measure the amplitude output at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35). Sub contrast control characteristics Vsc1 is calculated by the equation below:

$$V_{sc1} = 20 \log \frac{V_{OUT}}{0.7} \text{ (dB)}$$

**Vsc1 Sub contrast control relative characteristics1**

Relative characteristics Vsc1 is calculated by the equation below:

$$V_{sc1} = \frac{V_{OUT}(29)}{V_{OUT}(32)}, \\ \frac{V_{OUT}(32)}{V_{OUT}(35)}, \\ \frac{V_{OUT}(35)}{V_{OUT}(29)}.$$

**Vsc2 Sub contrast control characteristics2**

Measuring condition and procedure are the same as described in Vsc1.

**Vsc2 Sub contrast control relative characteristics2**

Measuring condition and procedure are the same as described in Vsc1.

**Vsc3 Sub contrast control characteristics3**

Measuring the amplitude output at OUT (29, 32, 35).

The measured value is called VSC3

**Vsc3 Sub contrast control relative characteristics3**

Measuring condition and procedure are the same as described in Vsc1.

**VMSC Main/sub contrast control characteristics**

Measure the amplitude output at OUT (29, 32, 35). The measured value is called VMSC

**VMSC Main/sub contrast control relative characteristics**

Relative characteristics VMSC is calculated by the equation below:

$$VMSC = \frac{V_{OUT}(29)}{V_{OUT}(32)}, \\ \frac{V_{OUT}(32)}{V_{OUT}(35)}, \\ \frac{V_{OUT}(35)}{V_{OUT}(29)}$$

**ABL1 ABL control characteristics1**

Measure the amplitude output at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35), and is treated as ABL1.

**ABL1 ABL control relative characteristics1**

Relative characteristics ABL1 is calculated by the equation below:

$$ABL1 = \frac{V_{OUT}(29)}{V_{OUT}(32)}, \\ \frac{V_{OUT}(32)}{V_{OUT}(35)}, \\ \frac{V_{OUT}(35)}{V_{OUT}(29)}$$

**ABL2 ABL control characteristics2**

Measuring condition and procedure are the same as described in ABL1.

**ABL2 ABL control relative characteristics2**

Measuring condition and procedure are the same as described in ABL1.

**Vb1 Brightness control characteristics1**

Measure the DC voltage at OUT (29, 32, 35) with a voltmeter. The measured value is called VOUT (29, 32, 35), and is treated as V<sub>B1</sub>.

**Vb1 Brightness control relative characteristics1**

Relative characteristics V<sub>B1</sub> is calculated by the difference in the output between the channels.

$$V_{B1} = \frac{V_{OUT}(29) - V_{OUT}(32)}{V_{OUT}(32) - V_{OUT}(35)}, \\ \frac{V_{OUT}(32) - V_{OUT}(35)}{V_{OUT}(35) - V_{OUT}(29)}$$

**Vb2 Brightness control characteristics2**

Measuring condition and procedure are the same as described in V<sub>B1</sub>.

**Vb2 Brightness control relative characteristics2**

Measuring condition and procedure are the same as described in V<sub>B1</sub>.

**Vb3 Brightness control characteristics3**

Measuring condition and procedure are the same as described in V<sub>B1</sub>.

**Vb3 Brightness control relative characteristics3**

Measuring condition and procedure are the same as described in V<sub>B1</sub>.

**M52742ASP****BUS CONTROLLED 3-CHANNEL VIDEO PREAMP FOR CRT DISPLAY MONITOR****Fc1 Frequency characteristics1 (f=50MHz)**

First, SG3 to 1MHz is as input signal. Input a resistor that is about 2k to offer the voltage at input pins (2, 6, 11) in order that the bottom of input signal is 2.5V. Control the main contrast in order that the amplitude of sine wave output is 4.0V<sub>P-P</sub>. Control the brightness in order that the bottom of sine wave output is 2.0V<sub>P-P</sub>. By the same way, measure the output amplitude when SG3 to 50MHz is as input signal. The measured value is called VOUT (29, 32, 35). Frequency characteristics Fc1 (29, 32, 35) is calculated by the equation below:

$$Fc1 = 20 \log \frac{VOUT \text{ V}_{P-P}}{\text{Output amplitude when inputted SG3 (1MHz): } 4V_{P-P}} \text{ (dB)}$$

**Fc1 Frequency relative characteristics1 (f=50MHz)**

Relative characteristics Fc1 is calculated by the difference in the output between the channels.

**Fc1' Frequency characteristics1 (f=200MHz)**

Measuring condition and procedure are the same as described in table, expect SG3 to 200MHz.

**Fc1' Frequency relative characteristics1 (f=200MHz)**

Relative characteristics Fc1' is calculated by the difference in the output between the channels.

**Fc2 Frequency characteristics2 (f=200MHz)**

SG3 to 1MHz is as input signal. Control the main contrast in order that the amplitude of sine wave output is 1.0V<sub>P-P</sub>. By the same way, measure the output amplitude when SG3 to 200MHz is as input signal.

The measured value is called VOUT (29, 32, 35). Frequency characteristics Fc2 (29, 32, 35) is calculated by the equation below:

$$Fc2 = 20 \log \frac{VOUT \text{ V}_{P-P}}{\text{Output amplitude when inputted SG3 (1MHz): } 4V_{P-P}} \text{ (dB)}$$

**Fc2 Frequency relative characteristics2 (f=200MHz)**

Relative characteristics Fc2 is calculated by the difference in the output between the channels.

**C.T.1 Crosstalk1 (f=50MHz)**

Input SG3 (50MHz) to pin2 only, and then measure the waveform amplitude output at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35). Crosstalk C.T.1 is calculated by the equation below:

$$C.T.1 = 20 \log \frac{VOUT (29, 32)}{VOUT (35)} \text{ (dB)}$$

**C.T.1' Crosstalk1 (f=200MHz)**

Measuring condition and procedure are the same as described in C.T.1, expect SG3 to 200MHz.

**C.T.2 Crosstalk2 (f=50MHz)**

Input SG3 (50MHz) to pin6 only, and then measure the waveform amplitude output at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35). Crosstalk C.T.2 is calculated by the equation below:

$$C.T.2 = 20 \log \frac{VOUT (29, 32)}{VOUT (35)} \text{ (dB)}$$

**C.T.2' Crosstalk2 (f=200MHz)**

Measuring condition and procedure are the same as described in C.T.2, expect SG3 to 200MHz.

**C.T.3 Crosstalk3 (f=50MHz)**

Input SG3 (50MHz) to pin11 only, and then measure the waveform amplitude output at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35). Crosstalk C.T.3 is calculated by the equation below:

$$C.T.3 = 20 \log \frac{VOUT (29, 32)}{VOUT (35)} \text{ (dB)}$$

**C.T.3' Crosstalk3 (f=200MHz)**

Measuring condition and procedure are the same as described in C.T.3, expect SG3 to 200MHz.

**Tr Pulse characteristics1 (4V<sub>P-P</sub>)**

Control the main contrast (00H) in order that the amplitude of output signal is 4.0V<sub>P-P</sub>.

Control the brightness (V30) in order that the Black level of output signal is 2.0V.

Measure the time needed for the input pulse to rise from 10% to 90% (Tr1) and for the output pulse to rise from 10% to 90% (Tr2) with an active probe.

Pulse characteristics Tr is calculated by the equations below :

$$Tr = \sqrt{[(Tr2)^2 - (Tr1)^2]}$$

**Tr Relative pulse characteristics1**

Relative characteristics Tr is calculated by the difference in the output between the channels.

**Tf Pulse characteristics2 (4V<sub>P-P</sub>)**

Measure the time needed for the input pulse to fall from 90% to 10% (Tf1) and for the output pulse to fall from 90% to 10% (Tf2) with an active probe.

Pulse characteristics Tf is calculated by the equations below :

$$Tf = \sqrt{[(Tf2)^2 - (Tf1)^2]}$$

**M52742ASP****BUS CONTROLLED 3-CHANNEL VIDEO PREAMP FOR CRT DISPLAY MONITOR****Tf Relative pulse characteristics2**

Relative characteristics Tf is calculated by the difference in the output between the channels.

**VthCP Clamp pulse threshold voltage**

Turn down the SG5 input level gradually from 5.0VP-P, monitoring the waveform output.

Measure the top level of input SG5 at when the output pedestal level is start to going down or unstable.

**WCP Clamp pulse minimum width**

Decrease the SG5 pulse width gradually from 0.5  $\mu$ s, monitoring the output. Measure the input SG5 pulse width (at the point of 1.5V) at when output pedestal level is start to going down or unstable.

**OTr OSD pulse characteristics1**

Measure the time needed for the output pulse to rise from 10% to 90% (OTr) with an active prove.

**OTf OSD pulse characteristics2**

Measure the time needed for the output pulse to fall from 90% to 10% (OTf) with an active prove.

**Oaj1 OSD adjust control characteristics1**

Measure the amplitude output at OUT (29, 32, 35). The measured value is called VOUT (29,32,35), and is treated as Oaj1.

**Oaj1 OSD adjust control relative characteristics1**

Relative characteristics Oaj1 is calculated by the equation below:

$$\begin{aligned} \text{Oaj1} = & \text{VOUT (29)/VOUT (32),} \\ & \text{VOUT (32)/VOUT (35),} \\ & \text{VOUT (35)/VOUT (29)} \end{aligned}$$

**Oaj2 OSD adjust control characteristics2**

Measuring condition and procedure are the same as described in Oaj1.

**Oaj2 OSD adjust control relative characteristics2**

Measuring condition and procedure are the same as described in Oaj1.

**OBLK OSD adjust control characteristics3**

Measuring condition and procedure are the same as described in Oaj1.

**OBLK OSD adjust control relative characteristics3**

Measuring condition and procedure are the same as described in Oaj1.

**VthOSD OSD input threshold voltage**

Reduce the SG6 input level gradually, monitoring output. Measure the SG6 level when the output reaches 0V. The measured value is called VthOSD.

**VthBLK OSD BLK input threshold voltage**

Confirm that output signal is being blanked by the SG6 at the time. Monitoring to output signal, decreasing the level of SG6. Measure the top level of SG6 when the blanking period is disappeared. The measured value is called VthBLK.

**HBLK1 Retrace BLK characteristics1**

Measure the amplitude output is blanked by the SG7 at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35), and is treated as HBLK1.

**HBLK2 Retrace BLK characteristics2**

Measure the amplitude output is blanked by the SG7 at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35), and is treated as HBLK2.

**HBLK3 Retrace BLK characteristics3**

Measure the amplitude output is blanked by the SG7 at OUT (29, 32, 35). The measured value is called VOUT (29, 32, 35), and is treated as HBLK3.

**VthRET Retrace BLK input threshold voltage**

Confirm that output signal is being blanked by the SG7 at the time. Monitoring to output signal, decreasing the level of SG7. Measure the top level of SG7 when the blanking period is disappeared. The measured value is called VthRET.

## BUS CONTROLLED 3-CHANNEL VIDEO PREAMP FOR CRT DISPLAY MONITOR

### SS-NV SOG input maximum noise voltage

The sync's amplitude of SG4 be changed all white into all black, increase from 0VP-P to 0.02VP-P. No pulse output permitted.

### SS-SV SOG minimum input voltage

The sync's amplitude of SG4 be changed all white or all black, decrease from 0.3VP-P to 0.2VP-P. Confirm no malfunction produced by noise.

### VSH Sync output hi level

Measure the high voltage at SyncOUT. The measured value is treated as VSH.

### VSL Sync output lo level

Measure the low voltage at SyncOUT. The measured value is treated as VSL.

### TDS-F Sync output delay time1

SyncOUT becomes High with sync part of SG4.

Measure the time needed for the front edge of SG4 sync to fall from 50% and for SyncOUT to rise from 50% with an active probe. The measured value is treated as TDS-F, less than 90nsec.

### TDS-R Sync output delay time2

Measure the time needed for the rear edge of SG4 sync to rise from 50% and for SyncOUT to fall from 50% with an active probe. The measured value is treated as TDS-R, less than 90nsec.

### VOH D/A H output voltage

Measure the DC voltage at D/AOUT. The measured value is treated as VOH.

### VOL D/A L output voltage

Measure the DC voltage at D/AOUT. The measured value is treated as VOL.

### IAO D/A output current range

Electric current flow from the output of D/AOUT must be less than 1.0mA --- IA+.

Electric current flow into the output of D/AOUT must be more than 0.18mA --- IA-.

### DNL D/A nonlinearity

The difference of differential non-linearity of D/AOUT must be less than  $\pm 1.0\text{LSB}$ .

### UNI1 Uniformity characteristics1

UNI2 Uniformity characteristics2

VuniA is amplitude output at OUT (29, 32, 35), when SG6 is low voltage. VuniB is amplitude output at OUT (29, 32, 35), when SG6 is high voltage.

moduration ratio UNI (UNI2) is calculated by the equation below;

$$\text{UNI1 (UNI2)} = 100 \cdot (\text{VuniB}/\text{VuniA} - 1) (\%)$$

**M52742ASP****BUS CONTROLLED 3-CHANNEL VIDEO PREAMP FOR CRT DISPLAY MONITOR****DESCRIPTION OF PIN** (cont.)

Pin No.	Name	DC voltage (V)	Peripheral circuit of pins	Description of function
30	Main Brightness	-		<ul style="list-style-type: none"> <li>It is recommended that the IC be used between pedestal voltage 2V and 3V.</li> </ul>

**APPLICATION METHOD FOR M52742ASP****CLAMP PULSE INPUT**

Clamp pulse width is recommended

above 15kHz, 1.0μsec

above 30kHz, 0.5μsec

above 64kHz, 0.3μsec.

The clamp pulse circuit in ordinary set is a long round about way, and beside high voltage, sometimes connected to external terminal, it is very easy affected by large surge.

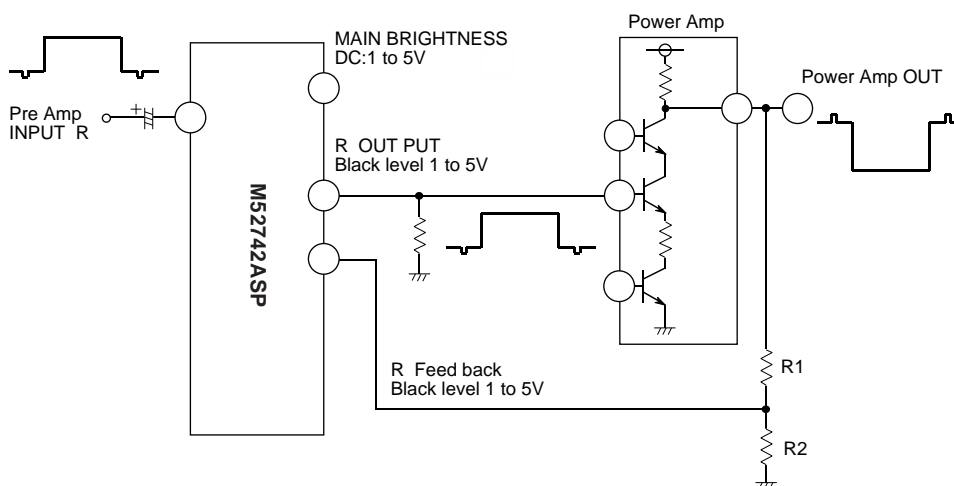

Therefore, the Fig. shown right is recommended.

**NOTICE OF APPLICATION**

- Make the nearest distance between output pin and pull down resistor.
- Recommended pedestal voltage of IC output signal is 2V.

**EXT-FEED BACK**

In case of application circuit example of lower figure, Set up R1, R2 which seems that the black level of the signal feedbacked from Power AMP is 1V, when the bottom of output signal is 1V.

**EXT-FEED BACK APPLICATION CIRCUIT**

Keep safety first in your circuit designs!

●Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

●These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.

●Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.

●All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.

The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.

Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (<http://www.mitsubishichips.com>).

●When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.

●Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.

●The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.

●If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.

Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.

●Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
