**M5290P,FP**

**±5V TRACKING REGULATOR WITH RESET CIRCUIT**

### DESCRIPTION

M5290 is a semiconductor integrated circuit designed for voltage regulator which is dual tracking type (positive/negative output voltage) with system reset circuit.

Since the output voltage is fixed inside, User can omit the outside resistors, and this IC includes the system reset circuit for detecting the abnormal status of Power Supply. When Power Supply of system is in abnormal status, this IC sends the system reset output (Low) to the MPU/CPU, so User can make the system operate safely.

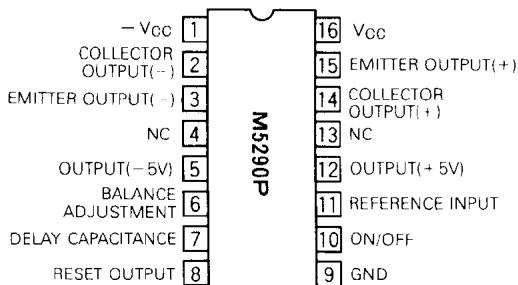

### FEATURES

- High input voltage .....  $V_I = \pm 20V$
- Fixed output voltage .....  $V_O = \pm 5V$
- Internal system reset circuit (with hysteresis)  
detectable voltage ..... 4.2V  
(delay time is variable by connecting capacity at 7pin (6pin for the FP))
- Current limiting circuit, thermal protection circuit
- Capable of ON/OFF control (10pin)
- Very Low input-output voltage differential operation by using transistor
- Variable output voltage (with external resistors connected between terminals ⑪ and GND and between positive output terminals).

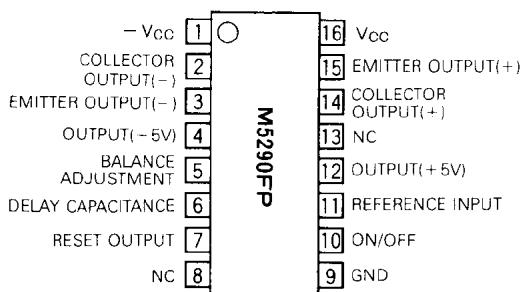

### APPLICATION

Dual power supply for CD players and stereo set pre-/main-amplifiers

## **±5V TRACKING REGULATOR WITH RESET CIRCUIT**

## APPLICATION EXAMPLE

### 1. Standard application example ( $I_b = \pm 30\text{mA}$ )

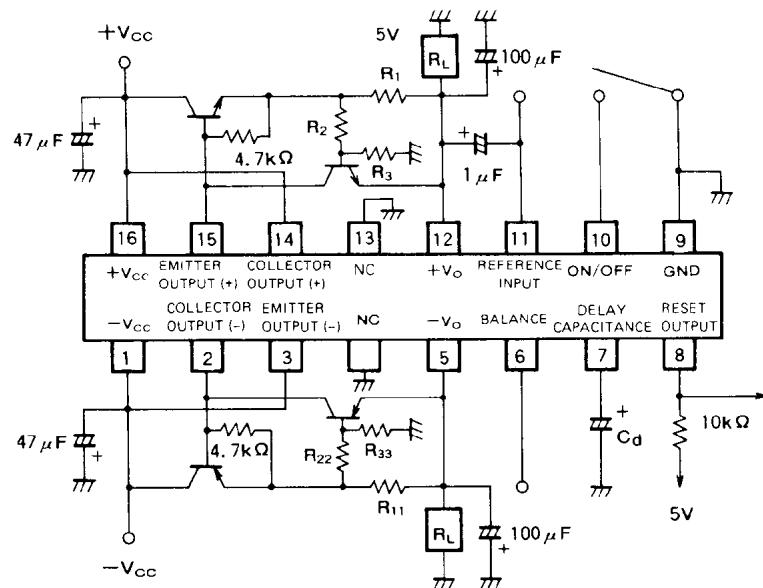

### 3. Very Low input-output voltage differential operation

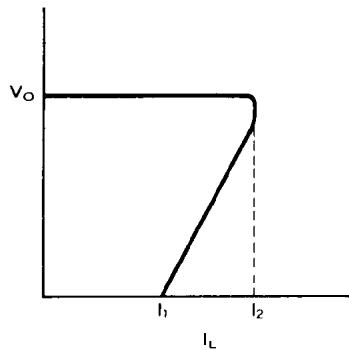

**±5V TRACKING REGULATOR WITH RESET CIRCUIT****(3) Foldback Protection Circuit Application****Example (M5290P Foldback System)**

The input/output voltage differential  $V_{IO}$  should be adjusted to be high enough considering the voltage difference developed at  $R_1$ .

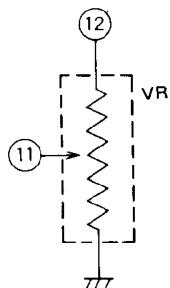

When two protective transistors are employed, the M5290P/FP can provide foldback characteristic for protection purposes. The  $I_1$  and  $I_2$  values are determined according to the external resistance.

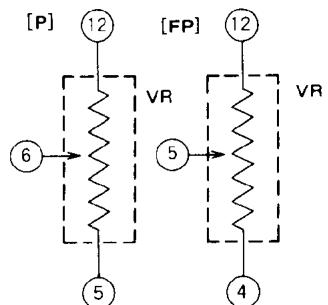

$$I_1 = \frac{R_2 + R_3}{R_1 \cdot R_3} \times 0.65 \text{ (A)}$$

$$I_2 = I_1 + \frac{R_2}{R_1 \cdot R_3} \times 12 \text{ (A)}$$

Cases where  $I_{L(Peak)} = I_2 \approx 500\text{mA}$  and  $I_1 \approx 100\text{mA}$   
 $R_1 = R_{11} = 13\text{k}\Omega$ ,  $R_2 = R_{22} = 2\text{k}\Omega$ ,  $R_3 = R_{33} = 2\text{k}\Omega$   
The required input/output voltage differential is 8V  
or greater.

**$\pm 5V$  TRACKING REGULATOR WITH RESET CIRCUIT****ATTENTION****1. In adjusting the output voltage (use ⑪pin)**

M5290P, FP is fixed the output voltage by inside resistors,  
but user can adjust it by using the outside resistor.  
(inside resistor: 2.4kΩ ⑪ to ⑨, 7.6kΩ ⑫ to ⑪)

**2. In adjusting the tracking voltage (use ⑥pin (⑤pin on FP))**

M5290P, FP is fixed the tracking voltage by inside resistor,  
but user can adjust it by using the output resistor.  
(inside resistor: ⑫ to ⑥ ⑥ to ⑤, 10kΩ for the M5290P )  
(⑫ to ⑤ ⑤ to ④, 10kΩ for the M5290FP)
