**DESCRIPTION**

The M54/74HC240, M54/74HC241 and M54HC244 are high speed CMOS OCTAL BUS BUFFER's fabricated in silicon gate C<sup>2</sup>MOS technology. They have the same high speed performance of LSTTL combined with true CMOS low power consumption. The designer has a choice of selected combinations of inverting and non-inverting outputs, symmetrical G (active-low output control) inputs, and complementary G and G inputs. Each control input governs four BUS BUFFERs.

These devices are designed to be used with 3-state memory address drivers, etc. All inputs are equipped with protection circuits against static discharge and transient excess voltage.
