

## MM54C373/MM74C373 TRI-STATE® Octal D-Type Latch MM54C374/MM74C374 TRI-STATE® Octal D-Type Flip-Flop

### General Description

The MM54C373/MM74C373, MM54C374/MM74C374 are integrated, complementary MOS (CMOS), 8-bit storage elements with TRI-STATE® outputs. These outputs have been specially designed to drive highly capacitive loads, such as one might find when driving a bus, and to have a fan-out of 1 when driving standard TTL. When a high logic level is applied to the OUTPUT DISABLE input, all outputs go to a high impedance state, regardless of what signals are present at the other inputs and the state of the storage elements.

The MM54C373/MM74C373 is an 8-bit latch. When LATCH ENABLE is high, the Q outputs will follow the D inputs. When LATCH ENABLE goes low, data at the D inputs, which meets the set-up and hold time requirements, will be retained at the outputs until LATCH ENABLE returns high again.

The MM54C374/MM74C374 is an 8-bit, D-type, positive-edge triggered flip-flop. Data at the D inputs, meeting the set-up and hold time requirements, is transferred to the Q outputs on positive-going transitions of the CLOCK Input.

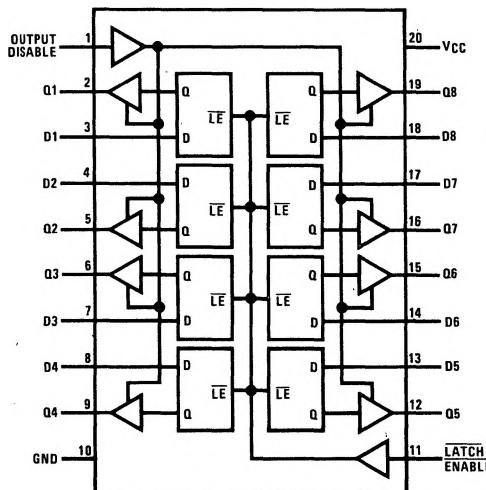

Both the MM54C373/MM74C373 and the MM54C374/MM74C374 are being assembled in 20-pin dual-in-line packages with 0.300" pin centers.

### Features

- Wide supply voltage range 3.0V to 15V
- High noise immunity 0.45 V<sub>CC</sub> (typ.)
- Low power consumption
- TTL compatibility fan-out of 1 driving standard TTL
- Bus driving capability
- TRI-STATE outputs
- Eight storage elements in one package
- Single CLOCK/LATCH ENABLE and OUTPUT DISABLE control inputs
- 20-pin dual-in-line package with 0.300" centers takes half the board space of a 24-pin package

**Absolute Maximum Ratings** (Note 1)

Voltage at Any Pin	-0.3 V to $V_{CC}$ + 0.3 V
Operating Temperature Range MM54C373	-55°C to +125°C
MM74C373	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Package Dissipation	500 mW
Operating $V_{CC}$ Range	3 V to 15 V
Absolute Maximum $V_{CC}$	18 V
Lead Temperature (Soldering, 10 sec.)	300°C

**DC Electrical Characteristics** Max./min. limits apply across temperature range, unless otherwise noted.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Capacitance is guaranteed by periodic testing.

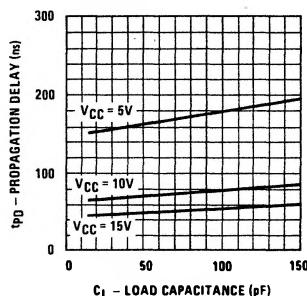

Note 3:  $C_{PD}$  determines the no load AC power consumption of any CMOS device. For complete explanation see 54C/74C Family Characteristics application note AN-90.

Note 4: These are peak output current capabilities. Continuous output current is rated at 12 mA max.

## Typical Performance Characteristics $T_A = 25^\circ\text{C}$
