

INTERFACE CIRCUIT - RELAY AND LAMP-DRIVER

- HIGH OUTPUT CURRENT
- ADJUSTABLE SHORT-CIRCUIT PROTECTION
- THERMAL PROTECTION WITH HYSTERESIS TO AVOID THE INTERMEDIATE OUTPUT LEVELS
- LARGE SUPPLY VOLTAGE RANGE : + 8 V to + 45 V

DESCRIPTION

The TDE1737-TDF1737 is a monolithic amplifier designed for high current and high voltage applications, specifically to drive lamps, relays and control of stepper motors.

This device is essentially blow-out proof. Current limiting is available to limit the peak output current to a safe value, the adjustment only requires one external resistor. In addition, thermal shut down is provided to keep the I.C. from overheating. If internal dissipation becomes too great, the driver will shut down to prevent excessive heating.

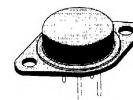

ORDER CODES

Part Number	Temperature Range	Package		
		CM	DP	FP
TDE1737	- 25 °C to + 85 °C	•	•	•
TDF1737	- 40 °C to + 85 °C	•	•	•

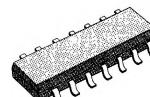

Example : TDE1737DP

The output is also protected against short-circuits with the positive power supply.

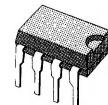

The device operates over a wide range of supply voltages from standard ± 15 V operational amplifier supplies down to the single + 12 V or + 24 used for industrial electronic systems.
