BIPOLAR ANALOG INTEGRATED CIRCUIT μ PC8112TB

SILICON MMIC 1st FREQUENCY DOWN-CONVERTER FOR CELLULAR/CORDLESS TELEPHONE

DESCRIPTION

The μ PC8112TB is a silicon monolithic integrated circuit designed as 1st frequency down-converter for cellular/cordless telephone receiver stage. This IC consists of mixer and local amplifier. The μ PC8112TB features high impedance output of open collector. Similar ICs of the μ PC2757TB and μ PC2758TB feature low impedance output of emitter follower. These TB suffix ICs which are smaller package than conventional T suffix ICs contribute to reduce your system size.

The μ PC8112TB is manufactured using NEC's 20 GHz ft NESATTMIII silicon bipolar process. This process uses silicon nitride passivation film and gold electrodes. These materials can protect chip surface from external pollution and prevent corrosion/migration. Thus, this IC has excellent performance, uniformity and reliability.

FEATURES

- Excellent RF performance : IIP₃ = -7 dBm@f_{RFin} = 1.9 GHz (reference)
IM₃ = -88 dBm@P_{RFin} = -38 dBm, 1.9 GHz (reference)
- Similar conversion gain to μ PC2757 and lower noise figure than μ PC2758
- Minimized carrier leakage : RF_{LO} = -80 dB@f_{RFin} = 900 MHz (reference)
RF_{LO} = -55 dB@f_{RFin} = 1.9 GHz (reference)
- High linearity : P_{O(sat)} = -2.5 dBm TYP.@f_{RFin} = 900 MHz
P_{O(sat)} = -3 dBm TYP.@f_{RFin} = 1.9 GHz
- Low current consumption : I_{CC} = 8.5 mA TYP.
- Supply voltage : V_{CC} = 2.7 to 3.3 V
- High-density surface mounting : 6-pin super minimold package

APPLICATIONS

- 1.5 to 1.9 GHz cellular/cordless telephone (PHS, DECT, PDC1.5G and so on)
- 800 to 900 MHz cellular telephone (PDC800M and so on)

ORDER INFORMATION

Part Number	Package	Markings	Supplying Form
μ PC8112TB-E3	6-pin super minimold	C2K	Embossed tape 8 mm wide. Pin 1, 2, 3 face the tape perforation side. Qty 3kpcs/reel.

Remark To order evaluation samples, please contact your local NEC sales office (Part number for sample order: μ PC8112TB).

- Cautions**
1. The μ PC2757 and μ PC2758's IIP₃ are calculated with $\Delta IM_3 = 3$ which is the same IM₃ inclination as μ PC8112. On the other hand, OIP₃ of Standard characteristics in page 7 is cross point IP.
 2. This document is to be specified for μ PC8112TB. The other part number mentioned in this document should be referred to the data sheet of each part number.

5. PIN EXPLANATION

Pin No.	Pin Name	Applied Voltage (V)	Pin Voltage (V)	Function and Application	Internal Equivalent Circuit
1	RFinput	–	1.2	RF input pin of mixer. This mixer is designed as double balanced type. This pin should be externally coupled to front stage with DC cut capacitor.	
2	GND	GND	–	Ground pin. This pin must be connected to the system ground. Form the ground pattern as wide as possible and the track length as short as possible to minimize ground impedance.	
5	Vcc	2.7 to 3.3	–	Supply voltage pin. This pin should be connected with bypass capacitor (example: 1 000 pF) to minimize ground impedance.	
6	IFoutput	as same as Vcc voltage through external inductor	–	IF output pin. This output is configured with open collector of high impedance. This pin should be externally equipped with matching circuit of inductor should be selected as small resistance and high frequency use.	
3	LOinput	–	1.4	Input pin of local amplifier. This amplifier is designed as differential type. This pin should be externally coupled to local signal source with DC cut capacitor. Recommendable input level is –15 to 0 dBm.	
4	PS	Vcc or GND	–	Power save control pin. This pin can control ON/OFF operation with bias as follows;

13. S-PARAMETERS

13.1 Calibrated on pin of DUT

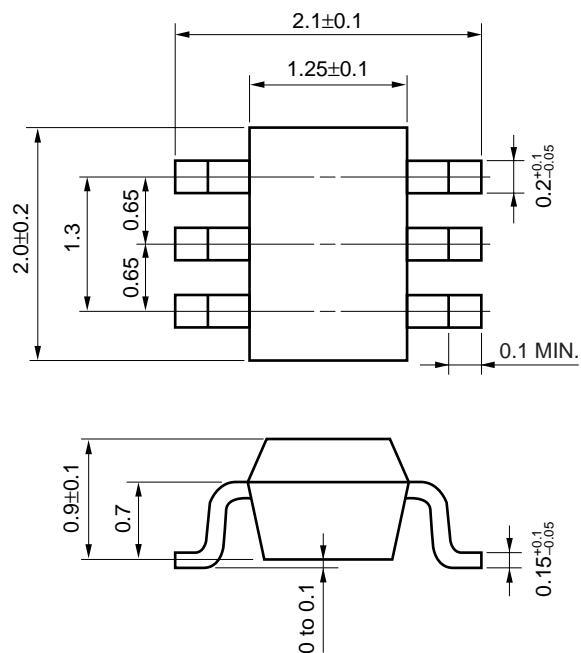

**13.2 IF Output Matching ($V_{cc} = V_{ps} = V_{IFout} = 3.0$ V) –on Test Circuit–
(This S_{11} is monitored at IF connector on test circuit fixture)**

The data in this page are to make clear the test condition of impedance matched to next stage, not specify the recommended condition. The S_{11} smith charts of the test fixture setting IC are normalized to $Z_0 = 50 \Omega$, because the IC's load is the measurement equipment of 50Ω impedance.

In your use, the output return loss value can be helpful information to adjust your circuit matching to next stage.

14. PACKAGE DIMENSIONS**6-PIN SUPER MINIMOLD (UNIT: mm)**

15. NOTE ON CORRECT USE

- (1) Observe precautions for handling because of electro-static sensitive devices.
- (2) Form a ground pattern as widely as possible to minimize ground impedance (to prevent undesired oscillation).
Keep the track length of the ground pins as short as possible.
- (3) The bypass capacitor (example: 1 000 pF) should be attached to the Vcc pin.
- (4) The matching circuit should be externally attached to the IF output pin.
- (5) The DC cut capacitor must be each attached to the input and output pins.

16. RECOMMENDED SOLDERING CONDITIONS

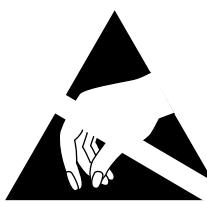

This product should be soldered under the following recommended conditions. For soldering methods and conditions other than those recommended below, contact your NEC sales representative.

Soldering Method	Soldering Condition	Recommended Condition Symbol
Infrared Reflow	Package peak temperature: 235°C or below Time: 30 seconds or less (at 210°C) Count: 3, Exposure limit: None ^{Note}	IR35-00-3
VPS	Package peak temperature: 215°C or below Time: 40 seconds or less (at 200°C) Count: 3, Exposure limit: None ^{Note}	VP15-00-3
Wave Soldering	Soldering bath temperature: 260°C or below Time: 10 seconds or less Count: 1, Exposure limit: None ^{Note}	WS60-00-1
Partial Heating	Pin temperature: 300°C Time: 3 seconds or less (per side of device) Exposure limit: None ^{Note}	-

Note After opening the dry pack, keep it in a place below 25°C and 65% RH for the allowable storage period.

Caution Do not use different soldering methods together (except for partial heating).

For details of recommended soldering conditions for surface mounting, refer to information document SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL (C10535E).

 - Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
 - While NEC endeavours to enhance the quality, reliability and safety of NEC semiconductor products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC semiconductor products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment, and anti-failure features.
 - NEC semiconductor products are classified into the following three quality grades: "Standard", "Special" and "Specific". The "Specific" quality grade applies only to semiconductor products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of a semiconductor product depend on its quality grade, as indicated below. Customers must check the quality grade of each semiconductor product before using it in a particular application.
 - "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
 - "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
 - "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.The quality grade of NEC semiconductor products is "Standard" unless otherwise expressly specified in NEC's data sheets or data books, etc. If customers wish to use NEC semiconductor products in applications not intended by NEC, they must contact an NEC sales representative in advance to determine NEC's willingness to support a given application.
- (Note)
- (1) "NEC" as used in this statement means NEC Corporation and also includes its majority-owned subsidiaries.
 - (2) "NEC semiconductor products" means any semiconductor product developed or manufactured by or for NEC (as defined above).
