Description

The DPAD/SSTDPAD series of extremely low-leakage diodes provides a superior alternative to conventional diode technology when reverse current (leakage) must be minimized. These devices feature leakage currents ranging from -1 pA (DPAD1) to -100 pA (SSTDPAD100) to support a wide range of applications.

The low-cost, compact, narrow-body SO-8

(SSTDPAD) package allows maximum circuit performance. Tape-and-reel options are available for automated assembly (see Packaging Information).

The TO-78 and TO-71 (DPAD) hermetically sealed metal cans are available with full military processing per MIL-S-19500 (see Military Information).
