## PENTAGRID CONVERTER

The 6A7 is a multi-electrode type of vacuum tube designed to perform simultaneously the functions of a mixer tube and of an oscillator tube in superheterodyne circuits.

For discussion of pentagrid types, see FREQUENCY CONVERSION, page 31.

### INSTALLATION AND APPLICATION

The base pins of the 6A7 fit the seven-contact (0.75-inch pin-circle diameter) socket which may be installed to hold the tube in any position. For heater and cathode operation, refer to type 6A8. Complete shielding of the 6A7 is generally necessary to prevent intercoupling between its circuit and the circuits of other stages. Refer to APPLICATION of types 6A8 and 2A7. A typical circuit is shown under type 2A7.
