

1. The schematic diagram is characteristic. The various values in the electric circuits are basic data, which are changeable according to the various basic circuits.

2. Testing waves are obtained by inputting the standard coloured bar of the signed.

3. Resistance unit is in Ohm, namely:

K=1000 M=1000K

Capacitance unit is in μ F.

P= $\mu\mu$ F ($\mu=10^{-6}$)

4. All resistors are 1/4W unless otherwise noted inside.

All capacitors are 50 WV.

5. Inductance unit is in μ H.

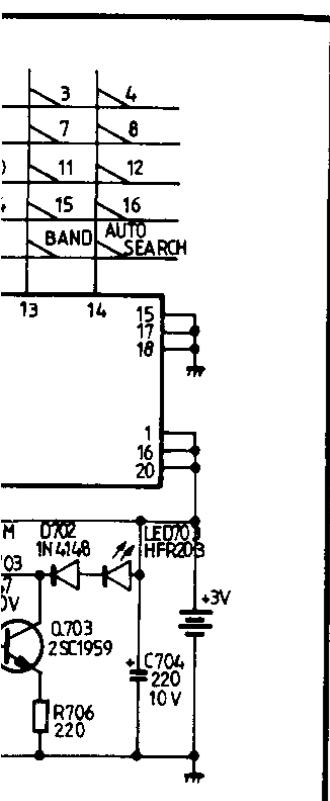

6. The mark \square in the diagram means Ferrite ring.

7. Some circuits which element number begin with „B“ (Q802, R836 etc.) are used only in Remote Controlled set. For manual-control set, the ARC line with arrow must be connected to E5 by the Jumper Line in order to control volume by potentiometer.

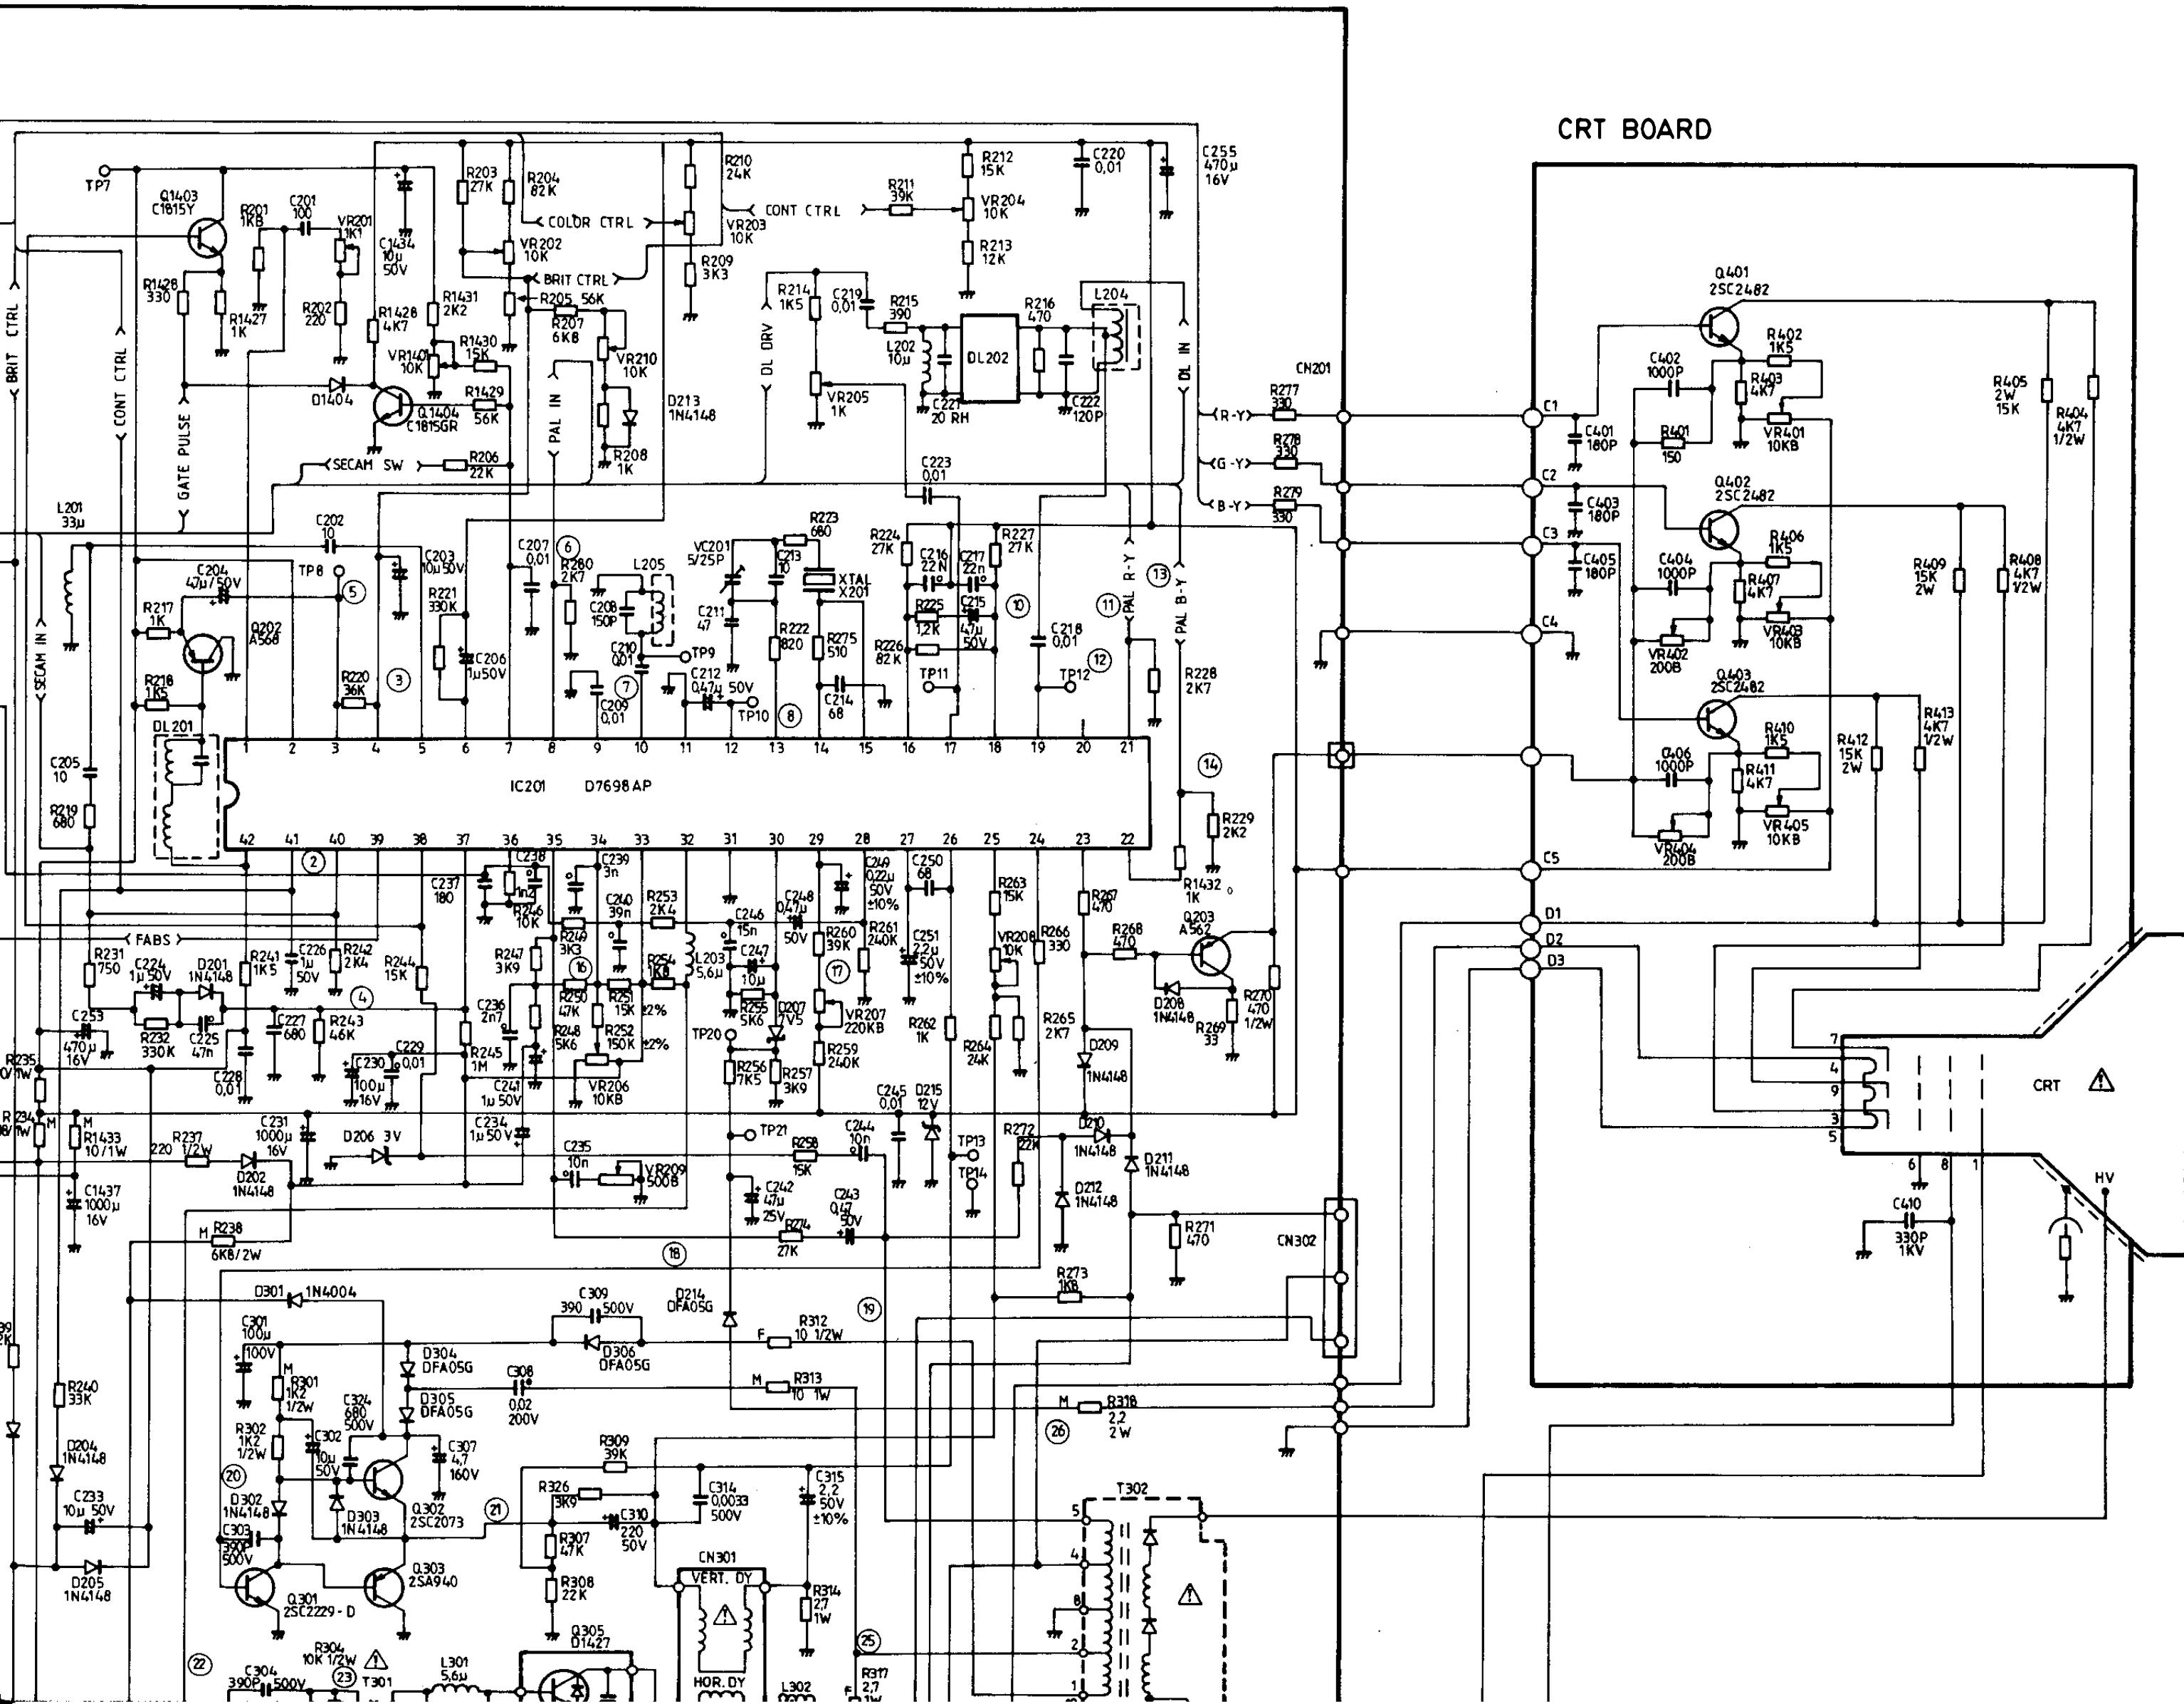

8. The symbols of various types of resistors and capacitors are listed as follows:

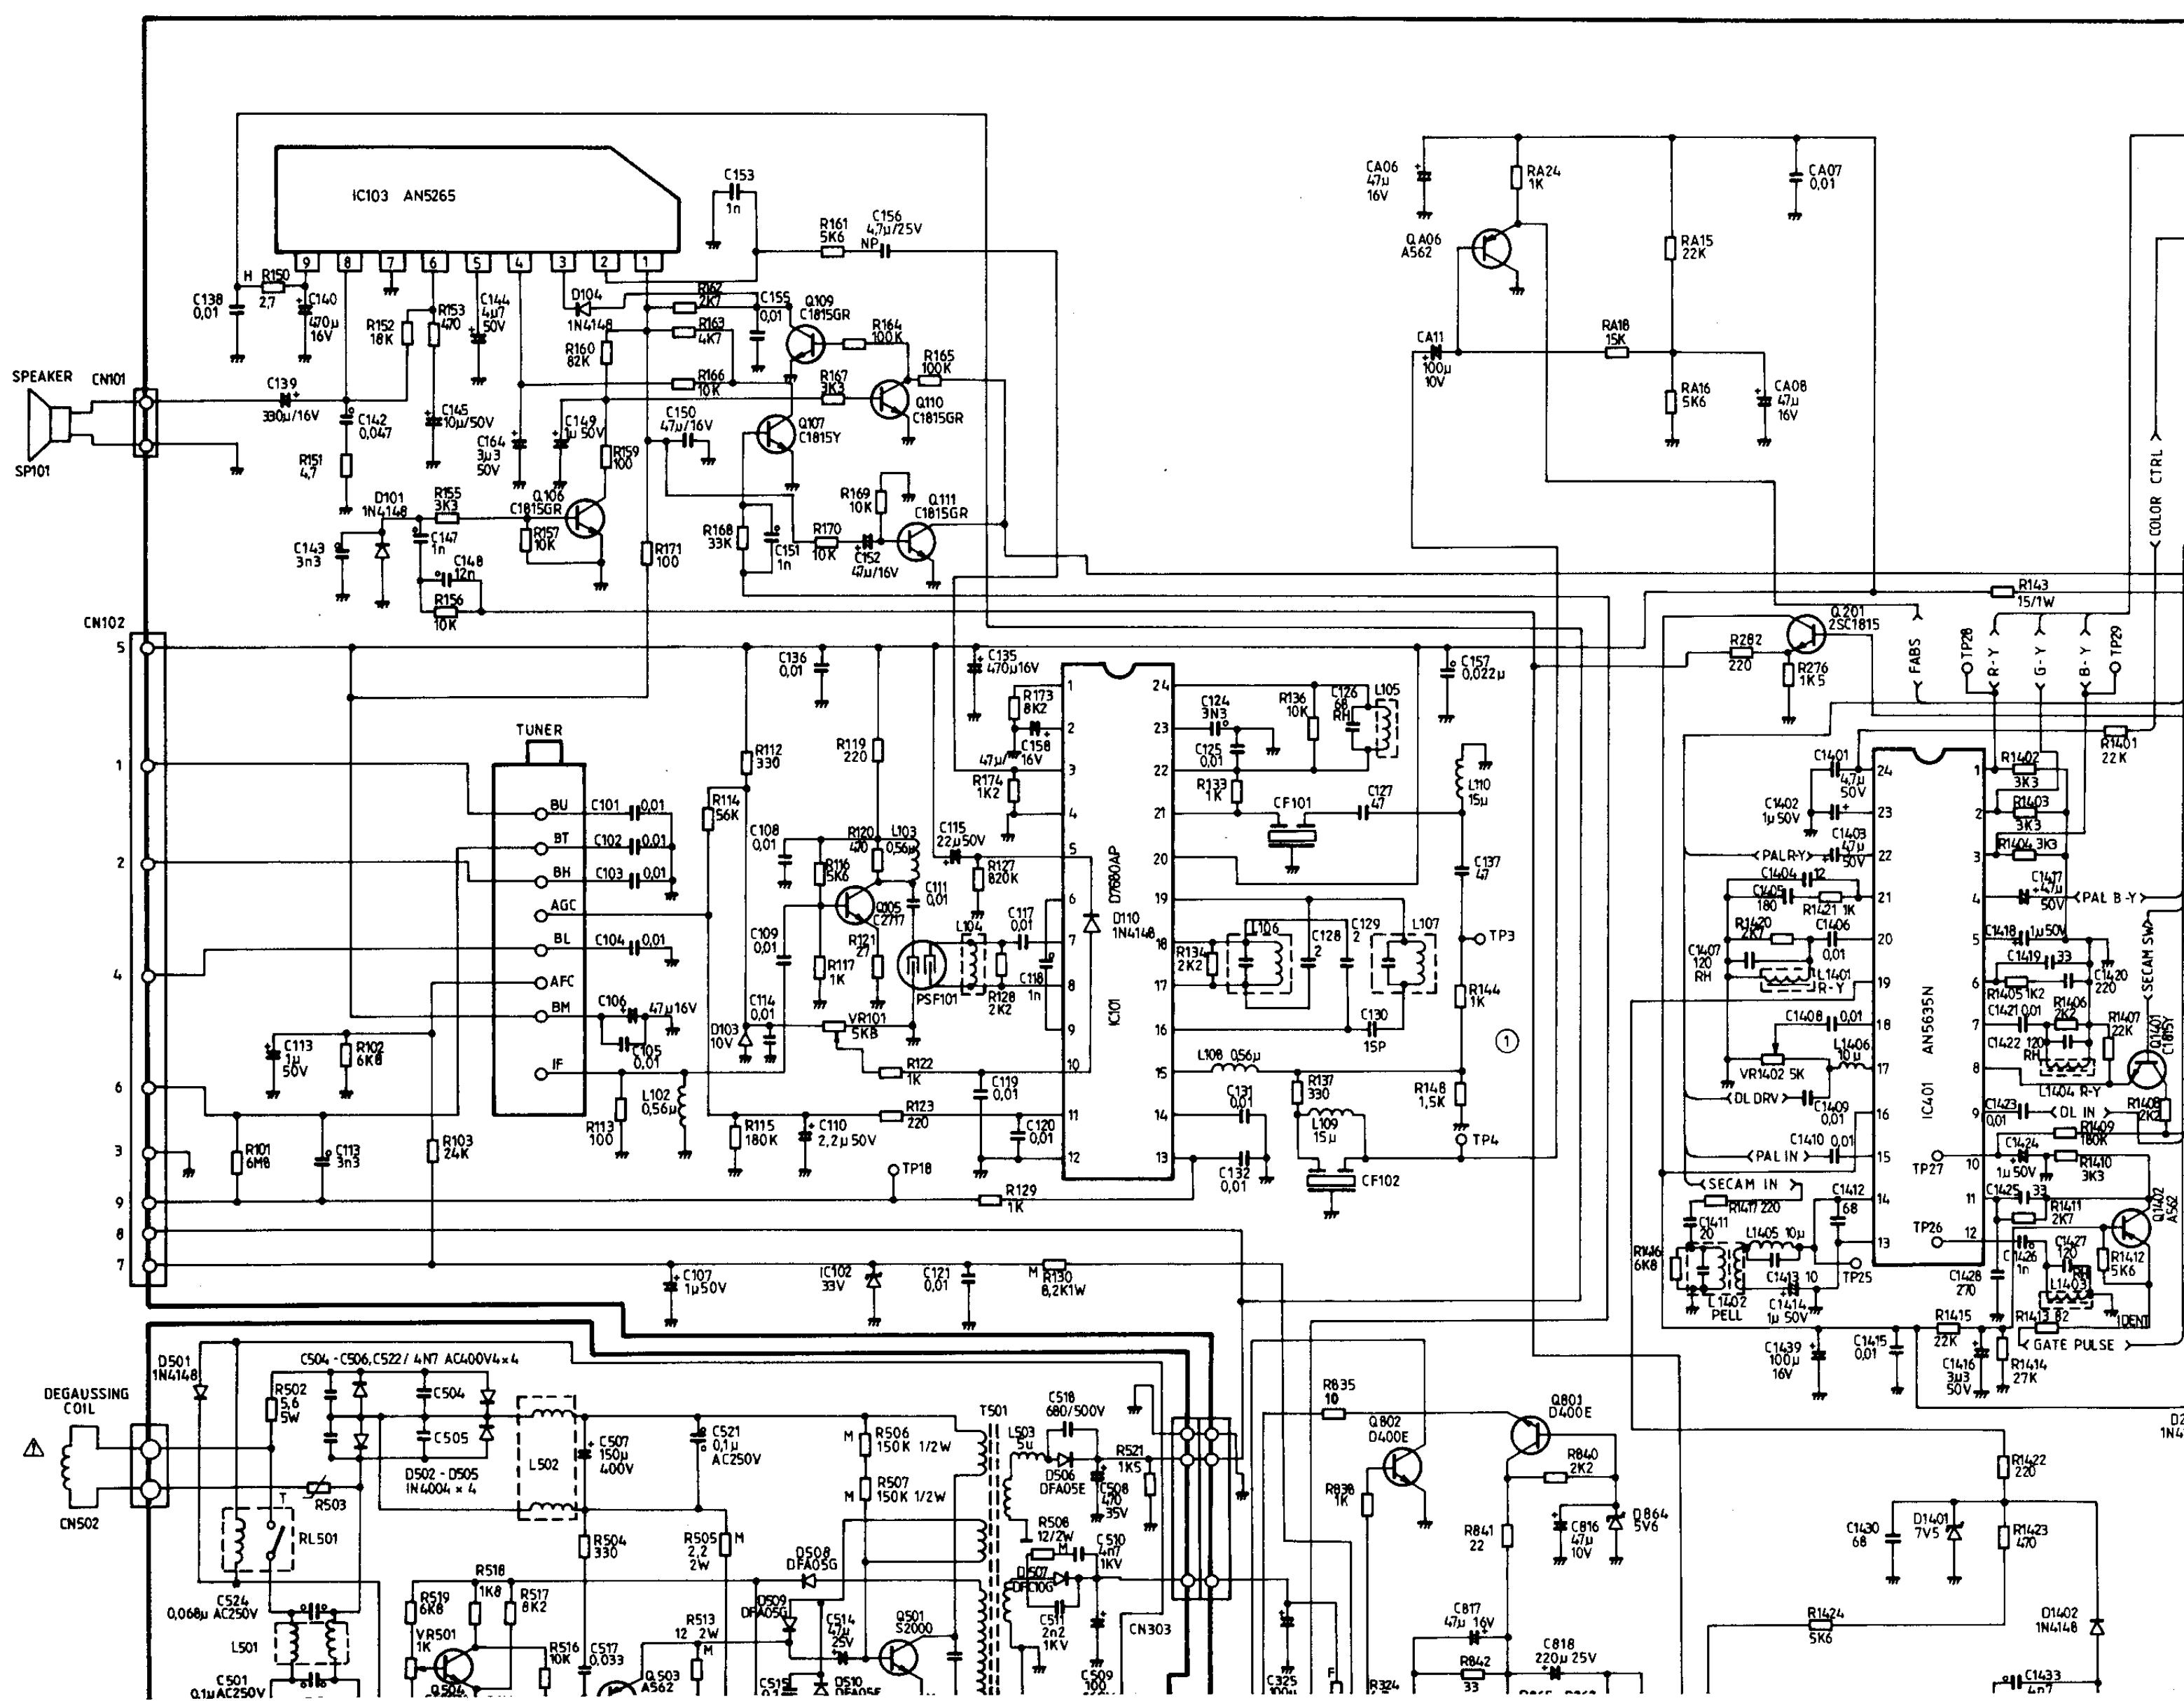

Carbon Film	
Metal Film	
Fusible	
Non-Inflammable	
Thermistor	
Potentiometer	
Ceramic	
AC Ceramic	
Polyester	
Polypropylene	
Metal Polyester	
Aluminium	
Tantalum	
Trimmer
